**ELDERLY PEOPLE & TOUCHSCREEN DEVICE
(KEYPAD DESIGN)**

AMIR SYAFIQ B. ABD AZIZ

2010729873

Thesis submitted in fulfilment of the requirements for
Bachelor of Science (Hons) Information System Engineering
Faculty of Computer and Mathematical Sciences

JULY 2014

ACKNOWLEDGMENT

First and foremost thanks to Allah SWT for giving me the opportunity in completing this final year project titled **Elderly People & Touchscreen Device (Keypad Design)**. This thesis is submitted in fulfilment of the requirements for Bachelor of Science (Hons) Information System Engineering Faculty of Computer and Mathematical Sciences.

I would like to thank my supervisor Dr. Fariza Hanis Abdul Razak for her continuous guidance, assistance, and invaluable advice.

I would like to thank to those who have been involved in the development of this dissertation. I'm sincerely from the bottom of my heart feel very thankful because through this research I have learned so many things which is I will remember and practice in the future.

ABSTRACT

In the world today, the portion of aging people grows continuously. Due to successful of healthcare services, people are living longer and the number of newborn is decreasing. This can imply that the population of young and working people is decreasing in many countries. This leads to the mean value incrementing of the mean world population's age value in the whole world. It has become more and more important to consideration human factors of elderly people in many businesses. IT product companies have to consider design of software concerning of usability for ageing people. Currently, most of the software is designed to support younger users. To support elderly users, we have to consider more on age-related differences. Since touchscreen device has totally changed the interaction experiences of an elderly users, as the touchscreen hugely popularized an elderly user become an abandon group in the rapid development of the technologies. This have been proved through the preliminary-interview "an elderly people having a problem using touchscreen device". This thesis have three objective, to find the exact problem face by the elderly, to find the suitable design feature of touchscreen device and to suggest an idea to the manufacture how the touchscreen device for an elderly people should be. The methodology used in this thesis is a qualitative research. Focus group for this project is an elderly people at the age of retirement. This project was conducted at Seksyen 7 Shah Alam, since the information could provide valuable suggestion on the further development and we hope the developer more concern about the elderly people and create more elderly user friendly touchscreen applications.

TABLE OF CONTENTS

CONTENT	PAGE
SUPERVISOR APPROVAL	ii
DECLARATION	iii
ACKNOWLEDGEMENT	iv
ABSTRACT	v
TABLE OF CONTENT	vi
LIST OF FIGURE	ix
LIST OF TABLE	x
CHAPTER 1: INTRODUCTION	1
1.1 Research Background	2
1.2 Statement of Problem	3
1.3 Research Objectives	4
1.4 Scope of Study	5
1.5 Significance of Research/Contribution to Body of Knowledge	6
1.6 Report Outline	6
CHAPTER 2: LITERATURE REVIEW	7
2.1 What does it mean by “Elderly People”	7
2.2 Ergonomic perspective for elderly people	8
2.3 Human Memory and the Operational Processes	10
2.4 Age-related differences human cognition	11
2.5 The barrier factors	12

2.6 Cognitive Decline	13
2.7 Functionality and usability in ageing	17
2.8 Anxious in use of technologies in the elders	17
2.9 Touch Gesture technology and elderly user	18
2.10 User-friendliness of technologies	20
2.11 ALTEC-Project	26
2.12 General HCI design guideline	27
2.13 HCI guideline for elder users	29
2.14 Technologies benefit for the elderly	31

CHAPTER 3: RESEARCH METHODOLOGY 32

3.1 Research Problem	32
3.2 Research Approach	33
3.3 Research Method	33
3.4 Conceptual Framework	34

CHAPTER 4: FINDING 38

4.1 Interview Preparation	38
4.2 Purpose of the interview	38
4.3 Interview selection and training	39
4.4 Interview procedure	41
4.5 Semi-structure interview question	41
4.6 Purpose of questions	43
4.7 Data transcribing	44
4.8 Data inspection and documentation	44
4.9 Finding base on interview question	45
