ACKNOWLEDGEMENT

First of all, we would like to thank Allah SWT for the completion of this business plan proposal as one of the requirements that needs to be accomplished in the coursework assessment for the code ENT530. Without His blessing, we may not be able to carry out our business plan proposal completely.

We would like to convey our heartfelt appreciation to our instructor, Puan Zainah Binti Jalil, for her essential advice throughout this project. Her vision, genuineness, and passion have left an indelible impression on us. It was a wonderful pleasure and joy to work and learn under her supervision. We'd also like to thank her for her compassion and sense.

Thank you to our beloved family members for assisting us in completing this project by providing a decent internet connection and a comfortable location to carry out this business plan. We have encountered several challenges as a result of this online distance learning. We can, however, handle it extremely effectively and maturely in dealing with any situation that arises.

Finally, by completing this business plan proposal, we have gained a great deal of knowledge and awareness about the subject of entrepreneurship. This assessment also gave us the opportunity to understand how a company operates in the real world. In which we may put our acquired talents to do a business in future.

EXECUTIVE SUMMARY

Trip Electronics is a four-person partnership firm. All partners occupy five key positions in the company, although one has two: General Manager and Administrative Manager, while the others are Marketing Manager, Operations Manager, and Finance Manager. On May 12, 2021, the partnership was formed. Trip Electronics was funded through personal contributions from partners around RM30,000 each. All donations from partners will go toward the capital and costs of our new business. We also want to use the money to acquire all of the necessary company equipment.

Trip Electronics operates at Cheras Centre Point @ Medan Connaught, Jalan 3/144a, Taman Cheras, Cheras, Kuala Lumpur. This location was chosen since it is centrally located in the city. This company's aim is to make consumers able to travel with ease while also delivering high-quality consumer-friendly and ecologically sustainable products. Trip Electronic is unique because it offers solar energy and may reduce time consumption. Trip Electronics will guarantee that the product will improve people's lives by providing high-quality products that are convenient for them.

Families are primarily Trip Electronics' target market. Families who frequently travel, namely, as the company focuses on electrical travel essentials. The business will offer goods that make travel smoother for customers using new innovations or ideas. When it comes to competitiveness, today's most common item is electrical equipment. Consequently, there is fierce competition. Trip Electronics modified the typical electrical cold box by including a heating section in order to penetrate the market. People may now simultaneously warm and cool their food. This creation will be called Elecpot.

The company will avoid all loans and borrowing strategies for its financial projections because there will be a lot of obligations and liabilities in the near future. The launch costs of the business will be fully covered by the partners' contributions of cash and existing fixed assets. The company will next do thorough planning to ensure that the enterprise can steer clear of any significant losses in the years to come.

1.0 COMPANY PROFILE

1.1 Organisation Background

- a) Name of the Organisation: Trip Electronics
- b) Business Address: Cheras Centre Point @ Medan Connaught, Jalan 3/144a,

Taman Cheras, Cheras, Kuala Lumpur

c) Website/e-mail address: i. tripelectronic@gmail.com

1.2 Organisation Logo/ Motto

Logo description, Organisation Mission and Vision

The large "T" represents our company's name so that customers can easily identify our product. Next, the word "trip" indicates that our company focuses on electrical devices used during travel. Finally, the red represents strength and trust in our products. So that our customers can have confidence in our products.

Table 1: Logo/ Motto of Trip Electronics

Mission

Everyone should be able to travel with ease.

Table 2: Mission of Trip Electronics

Vision

Improving people's lives by providing high-quality products that are convenient to them.

Table 3: Vision of Trip Electronics

2.0 ENVIRONMENTAL INDUSTRY ANALYSIS-OVERVIEW OF THE INDUSTRY

2.1 The overall nature of the industry, including sales and other statistics.

The Electrical & Electronic (E&E) industry consists of creating, producing, and selling electrical and electronic devices, from small components like microchips to bigger products like Elecpot itself. Electrical and electronics are among Malaysia's primary exports, making the E&E industry a substantial contributor to the country's economy. It has also been Malaysia's largest export earner for decades. In 2019, E&E contributed the most to the country's exports with 37.78%, and it is expected to increase in the future. According to Malaysia Productivity Corporation (MPC) director-general Datuk Abdul Latif Abu Seman, Malaysia has huge potential to meet the increasing global demand in the Electrical & Electronic sector. For example, local Electrical & Electronic brands in Malaysia, such as KHIND, PENSONIC, all produced quality electrical products that were used by other people, including people outside of Malaysia.

2.2 Note trends (Environmental and business trends) and demographics, as well as economic, cultural, and governmental influences.

According to (Buye,2021) the economic environment can be described as the changes in taxes, interest rate, inflation or deflation, and minimum wages that will indirectly affect the business's cost of operating. Lately, many raw materials have increased in price as a result of the COVID-19. As a result, the cost of some of our raw materials may have risen. For example, the price of steel has soared by 76% from 2021, forcing our manufacturer to increase the cost slightly. As the price of our raw materials has surged, this will indirectly increase our operating costs.

Social factors are aspects that influence someone's way of life. Wealth, religion, buying patterns, education level, household size and structure, and population density are all factors. Since our product helps consumers maintain their meals at a suitable temperature so they don't have to spend much time reheating the food, the target market is a household that likes to travel a lot. We want to help them to ease their journey. In addition to that, having a solar panel in the portable charger would help them in a situation when there is no other power source to power up the Elecpot. So you don't have to worry about having no electricity to power up the Elecpot.

The political environment of a country can have a major impact on how your message is perceived and understood. So far, the government has not yet imposed any official mandate to encourage the use of renewable energy because Malaysia itself is still dependent on renewable energy to power up the city etc. Malaysia still uses thermal power plants (petroleum, natural gas, charcoal) and hydro plants (hydroelectric) to produce electricity. As you can see, most of it is non-renewable energy. In 2021, Malaysia's government revised its 2025 renewable energy target to 31% from the National Energy Plan's 20% set in 2018. The presence of a solar panel in Elecpot's portable charger to some extent will encourage the user to use more renewable energy.

2.3 Key success factors.

The industry must understand and communicate five key success factors: strategic focus, people, operations, marketing, and finances. We believe that our product will improve people's lives by delivering excellent quality and convenience to all users, which falls under strategic focus. One of the company's initiatives is to use solar energy as the product's primary power source. Moreover, it will make the products more ecologically friendly.

The next key success factor is people. It is crucial to know how to recruit the right employees to manage the business. Trip Electronics has five managers: general manager, administrative manager, marketing manager, operation manager, and finance manager. Trip Electronic selects employees based on their qualifications and skills that are applicable to the company's positions. The general manager of Trip Electronics controls the company's operations in order to increase efficiency and profits. In the meanwhile, administrative managers plan and handle payroll. Marketing managers also generate demand for Trip Electronic's products and services. Finally, Trip Electronics' workflow is managed by operation managers.

Operation is another key success factor. Product operations is concerned with the processes, procedures, and tasks that employees perform inside the business. Trip Electronics will make sure that its products create a good customer experience by ensuring that their services have an adequate inventory check before being distributed and sold to customers. Trip Electronic will also send the employee to a training session in order to ensure the company's long-term success and to prevent mistakes from being made when performing the items. Furthermore, Trip Electronics will ensure that the goods are delivered on the same day that the customer placed the order.

Marketing is the next key success factor. Trip Electronics advertises through a variety of online platforms and uses Instagram, Facebook, Twitter, and TikTok as the most popular social media networks. To show appreciation towards customers, the company responds to anyone at any stage of the sales process. Furthermore, an online shop is available to allow customers to purchase from the comfort of their own home.

The last key success factor is finance. Trip Electronics is working hard to find a good product that is also affordable for everybody to purchase. The organisation has looked into a few manufacturers who can provide us with decent pricing while meeting our specifications.

3.0 DESCRIPTION OF VENTURE

3.1 **Opportunity**

General nature of the company

Trip Electronics is a company that sells electrical devices that are convenient for travellers. Trip electronics help customers travel with ease. With today's technology, people are travelling everywhere around the globe. Thus, creating the need for convenient tools for travel. Trip Electronics provides such solutions to the customers and helps them in their journey.

3.1.1 Details of product

	Primary use	Benefit	Unique features
Elecpot	 To store food and beverages. To keep meals or beverages fresh. 	 Avoid stale food and beverages. Allow travellers to eat while on the go. 	 Capable of cooling and heating at the same time. Includes a range of power sources.

Table 4: Details of Product

3.1.2 What problem will the Trip Electronic product solve?

The issues that Trip Electronics' Elecpot could solve are time consumption, financial overspending, and the environmental crisis. Users can save time by eating their meal on the go instead of stopping at a restaurant while travelling by using the Elecpot. Next, Elecpot customers can prepare their cuisine at home rather than buying it from a restaurant. Finally, the presence of solar panels on Elecpot's portable charger allows customers towarm and cool their meals in locations without an energy supply. As a result, the journey is made much easier.

3.1.3 Value Proposition

People will be introduced to technology's convenience and educated on the principles of reusable energy by utilising our Elecpot. Consequently, guiding our society toward a healthier, eco-friendly way of life. With an understanding of environmental sustainability, we can prevent a number of environmental issues, including climate change and greenhouse gas effects.

3.1.4 Why Trip Electronics will be successful?

There are a number of factors that will contribute to Trip Electronics' success. First, customers are looking for a better and more convenient product as a result of the quick growth of technology. They will automatically locate our business since we provide convenient travel products. Further, our company is pursuing greener technologies. We have already incorporated a solar panel, just like in our very first device. In line with today's environmental concerns, we strive to achieve even more significant improvements in green technologies for our upcoming products.

3.1.5 Customer demand

People are busier now than ever before. People value their time. Therefore, innovations to enable them to travel quicker are required. Elecpot is a technological advancement that makes it possible for individuals to reach their destinations faster by eliminating the need to stop and wait in lengthy lines in order to eat at their stops. Additionally, due to the climate change crisis, communities are now more concerned about issues relating to environmental sustainability. They may be interested in our solar panel when it is attached to one of our power sources.

3.1.6 Competition

Trip Electronics has many competitors, such as The Guitar Store Malaysia, Shojiki Store, and Huang Cff. Our invention, Elecpot, is currently the only electrical food and beverage box with the capacity to simultaneously cool and warm items. The products of these rivals can only effectively cool their food.

3.2 Outlook / Benchmarks / Timelines:

3.2.1 Major events that will take place in the short and long-term future.

Elecpot's marketing is a key event that may occur in the near future since many people are unaware of the benefits of the product. As a result, Trip Electronics must make an appealing advertisement to promote their products and persuade customers to purchase them.

Trip Electronics intends to pursue the global market for long-term events, which will most likely have a large number of potential customers. Single travellers and those who are continuously on the road are higher than those who are staying in Malaysia. Finally, it may increase Trip Electronics' sales and establish it as a well-known product in the international market.

4.0 MARKETING ANALYSIS AND COMPETITION

4.1 Target Market

We used segmentation to define our target market. A demographic component was used to choose the target market. We are looking for families who always travel. By advertising our practical goods, environmentally and family-friendly, we will attract more clients to buy our products. In addition, market research was conducted in order to gain a better understanding of the marketplace. It is easier to attract clients because the shop is in a prominent position. Aside from that, we analysed the market competitors before starting our firm in the area, allowing us to deliver the highest quality in comparison to them.

Because of its convenience, our product is a must-have for anyone who enjoys travelling. Our product offers three different power sources: a 3-pin connector, a 12V socket, and a portable solar panel. This feature will allow travellers to warm or cool their food at any time and in any location.

4.2	Estimated Market size and Trends	
	Target market No. of	

Target market	No. of	Potential	No. of Potential
	population	customer	customer
		(%)	
Families	40,000	25%	10,000
Total			10,000

Table 10: Trip Electronic's sales forecast for the year 2022

4.6 Marketing Strategy

4.6.1 Product

Our product is called ElecPot. Its major purpose is to warm and keep your food cold so that it does not go stale. This product's idea process is to assist consumers in maintaining their meal temperature so that they can dine on the go without having to stop at a specific point along their road trip to reheat their food or buy ice to keep their drinks cool. Consumers who want to save time on their journey will find ElecPot quite useful.

This product contains two compartments, one for heating and the other one for cooling. This two compartment has an isolation so that the temperature will not be mixed up. This attribute is the significant difference that our product has compared to our competitors. This device has a total capacity of 30 litres, with 15 litres for cooling and the remaining 15 litres for warming.

Even better, our product comes with a three-pin socket, a 12v socket for use in cars, and a solar-powered portable charger that can be used without an electricity supply. This will undoubtedly be beneficial to our clients.

In terms of packing, the goods will be placed in a box and covered in Polystyrene to protect its safety. We'll also throw in some silica gel. Finally, we separate the product from its power supply.

4.6.2 Pricing

We use a profit-oriented, satisfactory profit strategy to fix the price for our product. We are employing value-based pricing because we are new to the market. We established our price using this strategy by analysing the prices of our competitors. Then, through making a profit, we set a price that complements our product's material value while maintaining a reasonable price for our customers. Finally, we're employing the penetration pricing strategy to break into the market by offering a slightly lower price than our competitors. The price for one ElecPot will be RM600, which is lower compared to other competitors.

4.6.3 Sales tactics

Our firm employs three different sales techniques. Public relations, sales marketing, and social media are all examples of public relations. We will make a social media post about the crucial state of the globe today, such as global warming and climate change. Then, as in our product, introducing the solution, such as the use of solar panels. Then, through our social media posts, we encourage purchases by giving away coupons.

4.6.4 Service and warranty policy

Our company offers a one-year warranty on our products. The guarantee can only be used if the damages are caused by the company's negligence. External damage, such as car accidents, will not be covered by our warranty. Customers must preserve their receipt in order to claim the warranty. The warranty cannot be extended. Only the defective part will be replaced by the company. We also provide a delivery warranty to assure that the goods reach our customers securely. Finally, if the serial number on the goods has been altered, defaced, or removed, the warranty is void.

4.6.5 Promotion

Because our company only has one product line, we are concentrating our marketing efforts on product advertisements. We will use comparison advertising to market our product. We will promote our product on social media sites like Instagram and Facebook.

4.6.6 Distribution

There will be 1 method that our company will employ to distribute our product to our customers.

1. Manufacturer to Retailer to Consumer

This technique is employed in three scenarios. The first scenario is a walk-in circumstance, in which a customer comes to our store to make a purchase. Second, there's the self-pickup scenario, in which clients make an online purchase but wish to pick up the products themselves. The third scenario is when a consumer places an online order and requests delivery of the item to their doorstep. The DHL delivery service will be used to deliver the item.

4.7 Marketing Budget

MARKETING EXPENDITURE		
	RM	
Fixed Assets/Capital Expenditures		
Signboard	500	
Working Capital/Monthly Expenditure		
Instagram Ads	100	
Other Expenditures		
Business Card	200	
TOTAL	800	

Table 11: Marketing budget

5.0 OPERATION / PRODUCTION PLAN

5.1 Facilities

5.1.1 Location

Figure 3: Shop and office building of Trip Electronic

The head office of Trip Electronics is located in Cheras Centre Point at Medan Connaught, Jalan 3/144a, Taman Cheras, Cheras, Kuala Lumpur. Trip Electronics has operated out of this location because it is close to the city centre of Kuala Lumpur and is surrounded by many potential customers. The other benefit of this location is that there are no competitors nearby; this allows Trip Electronics to set up shop without having to worry about being overshadowed by other companies. Trip Electronics Shop is a six-story structure with an estimated 1,230 square feet per level. The ground floor is our store, where clients may come in and purchase Elecpot. Trip Electronics pays RM2,000 per month for rent on its one shop space (approximately 1,230 square feet).

5.1.2 Layout

Figure 4: Arrangement for Trip Electronic retail shop, office, and storeroom

The setup for Trip Electronics' shop, storeroom, and office is shown in the above graphic. Separated into three rooms by airtight walls, each area serves a distinct purpose: a storeroom is a place where we keep all inventory; the office room provides space for employees to work and interact, and the retail area is where customers can purchase products. Two shelves will hold all the products, while an air conditioner keeps temperatures comfortable for the staff to work in. We will furnish an air conditioner, toilet, shelf, table, chair, laptop, refrigerator, dustbin, carpet, and a printing machine for use by employees during their shifts in the office. This team will serve customers from an online store; update social media content promoting products on sale; provide financial statements for company operations by keeping records of sales made each day; and answer telephone calls directed at Trip Electronics' main office number. A cashier's table allows customers to pay using cash or credit cards. A cash register machine calculates prices based on items chosen by shoppers, with tax added automatically. The sofa and bench are for customers who need to sit down while strolling through our products. We will also provide an air conditioner, and a coffee table. Customers may then stroll into our store and purchase our products from two cabinet displays positioned on the shop floor.

Figure 5: Flowchart of the Production Process of Elecpot

Because we are a new company, we are unable to make the product adequately. Instead, we negotiated a deal with a manufacturer to construct our design. Manufacturers take one month to produce 100 units. We usually place an order when our inventory goes below 50. Trip Electronics will be acquired from the manufacturer, and the goods will be sent to our company by the manufacturer. Next, the goods will be packed into boxes. We will organise the Elecpot in the storage room once the inventory arrives and arrange it on the display cabinet also. Elecpot is now available in a display cabinet for customers to purchase. Customers may also place an order in our online shop, and we will send it to them using DHL eCommerce as our delivery service.

5.3 Raw Material and Packaging Requirements (per month)

Ingredient	Quantity	Safety	Price Per/Unit	Total Purchase
	Required	stock		(RM)
Electrical	50	5	250	13,750

9.0 CONCLUSIONS

We are grateful for the chance to work on this Trip Electronics business plan. We have learned a lot from the business plan, and it has been very valuable to us. Despite the numerous competitors and obstacles we encounter, we hope that our business strategy will go as planned in the future and that our company's goal will make considerable profits.

We are certain that our business is well positioned to become a highly recognized brand in the local and regional market due to our aggressive marketing strategy and detailed development of company products and services.

All of the Trip Electronis company's business partners have agreed to accept personal responsibility for all financial debt. The Company has taken all required efforts to guarantee that the business is well financed and that all financial shortages have been rectified to enable a successful business development. Trip Electronics will be able to recoup the investment and achieve operational success for many years to come if the business is able to maintain operations and meet standards during our first year of operation.

The above is designed to demonstrate our potential to handle our community or consumers with products and services that meet and surpass their requirements and desires. All of the aforesaid promotional techniques stated throughout the strategy will be carefully integrated and used in conjunction to enhance their effectiveness.

10.0 APPENDICES

APPENDIX 1: PARTNERSHIP AGREEMENT

PARTNERSHIP AGREEMENT

All partners agree to sign this partnership agreement on May 12, 2021, in the presence of two attorneys, Mrs. Amiera and Mrs. Sazarina, who have been appointed for this purpose. The purpose of this partnership agreement is to prevent any fraud or deception from occurring throughout the course of business operations and to guarantee that the firm runs effectively and electively.

Below are the partners of TRIP ELECTRONICS COMPANY:

NAME	IC NUMBER
1) Muhammad Iman bin Ahmad Fariman	010309-10-1053
2) Muhammad Nur Iman bin Nor Azli	010524-14-1613
3) Natasha Adriana Binti Abdul Halim	980512-05-5694
4) Hazim bin Azman	001213-06-0571

We all strengthen under one roof of TRIP ELECTRONICS COMPANY and will strive to bring out the product to customers and market nationally and internationally in the future.

We all reached a common understanding regarding information sharing, transparency, trust, and decision-making engagement, which contributed to the development of our company TRIP ELECTRONICS. We have decided to collaborate and struggle until the end in order to achieve our profit goals and fulfill our mission and vision. This agreement represents our continuous cooperation, and we will work together in good faith and maintain a tight connection to ensure the success of our firm.

1) Company's Name

Five partners under Partnership Act Registered 1951 (Amendment 1974) established TRIP ELECTRONICS COMPANY.

2) Business Form

Our business operations and administration will base on the Business Registration Act 1956 (revised 1978) and our business carries on the partnership.

3) Business Location

TRIP ELECTRONICS COMPANY

Cheras Centre Point at Medan Connaught,

Jalan 3/144a, Taman Cheras,

Cheras, Kuala Lumpur.

4) The Business will start

Our business will start on 12th May 2021. This business will not be dissolved if one of the Partners is dead, but it will be dissolved if all partners are agreed to dissolve it.

5) Partners Position

NAME	POSITION
5) Muhammad Iman bin Ahmad Fariman	General Manager &
	Administrative Manager
6) Muhammad Nur Iman bin Nor Azli	Marketing Manager
