

**EMISSION CONSTRAINT ON SHORT-TERM SCHEDULE OF
THERMAL UNITS BY USING PARTICLE SWARM OPTIMIZATION
METHOD**

ABIDI BIN CHE MUSTAFA

**This thesis is presented in partial fulfillment for the award the
Bachelor of Electrical Engineering (Honors)
Universiti Teknologi MARA (UiTM)**

JULY, 2012

ACKNOWLEDGEMENT

First of all, praise to Allah S.W.T, for His permission and blessing for making this project successfully complete. Without His permission, it is impossible to make anything happen and become true.

I would like to express my special gratitude and thanks to my supervisor, Assoc. Prof. Bibi Norasiqin bt Sheikh Rahimullah for all her valuable guidance, advices, suggestions and support throughout this project. She always gives the idea and encouragement in helping me to carry out the project in a better way, Her knowledge is very useful for me to do the research appropriately.

I would also like to give my deepest thanks and appreciation to my family for their moral support and encouragement. I am greatly indebted to all my friends for the morale support and valuable suggestions.

Finally, I would like to extend my gratitude to those who have contributed information, knowledge, ideas, time and effort directly or indirectly helped me in the process and contributed toward this work.

ABSTRACT

In unit commitment (UC) problem, power generating units need to be scheduled in order to meet the forecasted load for certain periods of time in a day. The objective is to minimize the total production cost. Nowadays, minimizing the production cost can no longer be the only criterion for dispatching electric power due to increasingly concern over the environment consideration. In this study, the UC problem is solved with consideration of environment protection by calculating the pollutant emission of thermal power plant, due to burning fossil fuels, such as coal, oil or gas to convert into electrical energy. This project presents a methodology for solving the short-term UC with environment consideration problem by using particle swarm optimization (PSO) method. The proposed PSO approach has been successfully tested on the IEEE 26-bus system with 6 generating units and divided into six stages within 24 hours.
