## **ACKNOWLEDGEMENTS**

First of all, Alhamdulillah and all praises to Allah for His blessing and lend me strength to finish the research. I would like to credit my thanks to my supervisor, PM Bibi Norasiqin Sheikh Rahimullah for her continuous support and advices in completing thus research. I am really grateful for her guidance and encouragement with patience in motivating me while conducting the research. I also take this opportunity to express my sincere thanks to my family members, lecturer of Faculty Electrical Engineering, fellow friends and those who has help me, directly and indirectly.

## ABSTRACT

This thesis presents the solution of profit-based unit commitment (PBUC) by using particle swarm optimization (PSO) technique. In this study, the on/off scheduling of generator units will be determined based on maximizing the profit while fulfilling the constraints. The proposed solution also helps to make decision on how much power and reserve is put up in the market sale while giving maximum profit based on the price behavior in the spot market. This optimization technique is performed on a test system consisting of three and ten generating units to study the effectiveness of this method to the PBUC problems. The results are compared to conventional unit commitment problem (UCP).

*Keywords - problem-based unit commitment (PBUC), particle swarm optimization (PSO), unit commitment problem (UCP)*
