## ABSTRACT

As the number of network applications, devices and technologies used were increasing rapidly over the past years, resource control and network management are becoming challenging issues in maintaining network performance. Load balancing is crucial in order to allocate massive workload across many nodes in the network. Software Defined Networking (SDN) is a promising platform to build load balancer as it enables fast application deployment and delivery, thus reducing IT costs through policy-enabled workflow automation. This paper focus on the design of a SDN based server load balancing application that will handle traffic load flowing into the system. The completed system is simulated on POX controller, an OpenFlow switch and three set of network topologies consisting the same number of hosts but different number of clients. Results show that round robin based load balancer yield better average response time and network bandwidth utilization, but shows<sup>^</sup> tradeoff in the aspect of CPU utilization.

## ACKNOWLEDGEMENT

*"In the Name of ALLAH S. W. T., the Most Gracious and the Most Merciful"*

I wish to express my deepest and sincerest gratitude to all those who supported me all throughout the whole process of finalizing this report. First and foremost, I would like to acknowledge and extend my gratitude to my Final Year Project's Supervisor, Assoc. Prof. Md Mahfudz Md Zan for the guidance and useful comments given all the way from the proposal-making process up to the completion of this project. In particular, I also wish to express my grateful thanks to all my friends especially Nor Aniza Noor Amran, that had been helping and giving various kind of supports to me throughout project's completion. All opinions and critics expressed by them are highly appreciated and are very useful all the time. This report would not have been the same as documented here without the continued support and contribution from them.

My appreciation also go to my family members especially my parents, W. Hashim W. Nawang and Aminah Mohd. Noor for the encouragements and any form of supports given throughout the whole process. Special thanks goes to all individuals who have been helping me either direct or indirectly during progress of this project.

# TABLE OF CONTENTS

	<b>Page</b>
<b>AUTHOR'S DECLARATION</b>	<b>ii</b>
<b>SUPERVISOR'S DECLARATION</b>	<b>iii</b>
<b>ABSTRACT</b>	<b>iv</b>
<b>ACKNOWLEDGEMENT</b>	<b>v</b>
<b>TABLE OF CONTENTS</b>	<b>vi</b>
<b>LIST OF FIGURES</b>	<b>ix</b>
<b>LIST OF TABLES</b>	<b>xi</b>
<b>LIST OF SYMBOLS</b>	<b>xiii</b>
<b>LIST OF ABBREVIATION/NOMENCLATURE</b>	<b>xiii</b>
<b>CHAPTER ONE : INTRODUCTION</b>	<b>1</b>
1.1 Background of Study	1
1.2 Problem Statement	3
1.3 Significance of Study	4
1.4 Objective	4
1.5 Scope and Limitation of Study	5
1.6 Thesis Organization	6
<b>CHAPTER TWO: LITERATURE REVIEW</b>	<b>7</b>
2.1 Software Defined Networking Architecture	7
2.1.1 Software Defined Networking Elements	8
2.1.1.1 Separation of Control Plane	9
2.1.1.2 Logical Centralization	9
2.1.1.3 Programmability	10
2.1.1.4 Northbound APIs	11
2.1.1.5 Flow Entries	11
2.2 Overview of OpenFlow	12
2.3 OpenFlow Controllers	14

- 2.4 Overview of SDN Based Load Balancer
- 2.5 Overview of Load Balancing Algorithm
  - 2.5.1 Random Algorithm
  - 2.5.2 Round Robin Algorithm
- 2.6 Result Comparison from Past Researches
- 2.7 Qualitative Parameters for Load Balancer
- 2.8 Existing Journal and Research Paper

### **CHAPTER THREE: METHODOLOGY**

- 3.1 Introduction
- 3.2 System Components
  - 3.2.1 VMware Workstation 11
  - 3.2.2 POX Controller
  - 3.2.3 Mininet
  - 3.2.4 IPerf
  - 3.2.5 HTTPPerf
  - 3.2.6 OpenWebLoad
- 3.3 Flowchart Of SDN Based Load Balancer's Design
- 3.4 Software Controller Set Up
- 3.5 Load Balancer Network Model
- 3.6 Load Balancer Network Topology Execution
- 3.7 SDN Based Load Balancing Module Execution
- 3.8 POX Module Programming
  - 3.8.1 Random Based Load Balancing Application
  - 3.8.2 Round Robin Based Load Balancer

### **CHAPTER FOUR: RESULTS AND DISCUSSION**

- 4.1 Introduction
- 4.2 Simulation For Software Defined Networking Based
- 4.3 Result Of Network Parameters' Testing
  - 4.3.1 Average Response Time
  - 4.3.2 Bandwidth of Network
  - 4.3.3 CPU Utilization
