TRAFFIC MANAGEMENT USING VRF-LITE OVER MPLS VPN

NUR ASIKIN BT ZAHARI

Thesis submitted in partial fulfilment of the requirements for the degree of

Master of Science in Telecommunication Information Engineering

Faculty of Electrical Engineering

January 2015

ABSTRACT

Congestion at the Branch WAN-LAN link is occurred due to the unparalleled increased of the bandwidth at the LAN and WAN link. The traffic management for the outgoing traffic from HQ LAN is being proposed to overcome the congestion at the Branch WAN-LAN link and increase the overall performance of the enterprises VPN. VRF-lite which is one of the methods for traffic management is being proposed to overcome the bottle neck at the Branch WAN-LAN link and also to fully utilize all the available links at the sites. The VRF-lite is being applied at the HQ WAN router. The outcome from the setup shows that by using VRF-lite, both of the links at HQ and Branch is being utilized and the congestion at the Branch WAN-LAN link is minimized.

ACKNOWLEDGEMENT

The author would like to express the deepest gratitude and appreciation to the project supervisor, Associate Professor Ruhani Ab Rahman who is giving me the golden opportunity to do this wonderful project and also for the useful comments, remarks and engagement through the learning process of this project. .1 came to know about so many new things and I am really thankful to her. I am highly indebted to Telekom Malaysia for providing necessary information regarding the project, equipment to being used for this project and also for their support in completing the project. Lastly, I would also like to thank my husband, daughter, parents and friends who helped me a lot in finalizing this project within the limited time frame.
