ACKNOWLEDGEMENT

In the name of Allah, The Most Gracious, The Most Merciful. Praised be to Prophet Muhammad S.A.W, his companions and those who are on the path as what he preached upon. My everlasting thank to Allah for granting me patience and hope in completing this project.

I wish to thank all those who have helped in making the preparation and completion of this project a success. Without their efforts, I am sure that the project would not have been completed within the specified time.

My utmost appreciation and gratefulness to Project Supervisor, Puan Husna Abdul Rahman for her untiring efforts in providing guidance, encouragement and invaluable advises has helped tremendously in completing this project. The appreciation also goes to Assoc. Prof Zunairah Hj. Murat for providing necessary information and laboratory equipments.

My sincere appreciation goes to my family especially my mother and my father for their motivation and support. Without them, I don't think I will be where I am today.

Last but not least, special thanks to all my friends especially Miss Norhazlinda binti Harun and anybody who involved directly or in directly for their support, help and advice.

ABSTRACT

This project analyzes the correlation of body mass index (BMI) and human psychological condition using energy field interpretation. Frequency measurement is taken from 40 students including male and female students with different BMI categories. The analysis were categorized in four parts which are poor, moderate, good and excellent emotional health. This is to see the relation of different psychological condition with BMI category such as underweight, normal, overweight and obese. Based on the results presented, it can be said that all the samples in general have moderate mental or emotional health except for the samples with normal BMI. Samples with normal BMI show overall good mental or emotional health. The findings show that samples that are obese have the highest tendency to have poor psychological health. Person with good emotional health are aware of their thoughts, feelings and behaviors. They have learned healthy ways to cope with the stress and problems that are a normal part of life. They also feel good about themselves and have healthy relationship. It also implies that taking care of our body is a powerful step towards mental and emotional health.

CHAPTER 1

INTRODUCTION

1.1 INTRODUCTION

RFI is an electromagnetic feedback and imaging process. This new technology gives detailed scientific information and objective interpretations for all Auras and bio-energy fields, and identifies the type and function of all bio-energies present in specific regions of the human brain. The study of human body RF radiation would involve the measurement of the RF radiation using a special frequency counter at specific regions of the human body. Using this new technology of Resonant Field Imaging (RFI), it also can provide data and informative interpretations for auras and bio-energy fields, and identifies the type and function of bio-energies present in specific regions of the human body [1].

The Resonant Field Imaging system consists of a small, hand-held, easy to use device which, placed in a person's energy field, provides electromagnetic feedback. It is a hand-held digital frequency counter with a specially tuned antenna [1].

RFI and the presumption of the existence of the aura is based upon the principal that all mental activity is electromagnetic. In electrical engineering, it is an established that all electrical currents produce surrounding electromagnetic fields. Accordingly, our psychological and emotional activities are sent throughout the body as electrical impulses, radiating electromagnetic fields outside the body, which are characteristic of the mental activity that generated them. The aura is highly characterized and affected by the emotional and physical condition of a person, the biological homeostasis or imbalance of plant life, or the molecular energies inherent in and surrounding an object. This makes the reading of Auras a very useful and powerful tool for the metaphysical and clinical analysis of humans, animals, plants and objects. Since color is defined as frequency, and the Aura is merely an electromagnetic radiation of diverse frequencies,
