ACKNOWLEDGEMENT

In the name of Allah the Almighty, the Most Beneficent and the Most Merciful. I would like to express my deepest gratitude to Him that I have managed to finish this thesis and if not of His Help and Guidance the report would not have been completed as it is today.

It is a great pleasure for me to express my deep gratitude and appreciation to Puan Ros Shilawani S.Abdul Kadir as my project supervisor for all her efforts and guidance throughout my project completion. Her guides and advices have made this project a success. Without her encouragements and supports I am sure I can go nowhere. Thank you so much for being so understanding.

Special thanks to Puan Husna Abdul Rahman, my Co-Supervisor, my friends, lecturers, technicians lab, and many others that I cannot mention here, I would like to say thank you for your cooperation. It is a great appreciation for being a part of an important people through this entire project.

Finally, to my family members, thank you for your continuous support and encouragement in my study and my life.

Thank you.

Noradilah Binti Alias

ABSTRACT

This research presents an analysis on the aura of human body before and after performing ablution by using Resonant Field Imaging (RFI) system. The objectives are to analyze the aura of human body before and after performing ablution and analyze whether performing ablution can give good effect to human body. The measurement was taken from 30 female samples around 2 minutes before and after performing ablution. The data collected was analyzed by translating into the color of aura with different score. The result show that 67% of the sample does improve of human body aura after performing ablution. The analysis by region also shows that *excellent* and *good* category does improve. Based on the result presented, it can be concluded that the human body aura does improve significantly by performing ablution.

Keywords: Resonant Field Imaging (RFI), Ablution (wudu'), Aura
