

SIMULATION ON WCDMA FOR 3G MOBILE SYSTEMS

Thesis is presented in partial fulfillment for the award of Bachelor of
Electrical Engineering (Honours)
UNIVERSITI TEKNOLOGI MARA

HAMIZI BIN ZAMZURI
Faculty of Electrical Engineering
UNIVERSITI TEKNOLOGI MARA
40450 SHAH ALAM, SELANGOR

ACKNOWLEDGEMENT

I would like to express my gratitude to Ir. Muhammad Bin Ibrahim, who has been great person in supervising, guiding and encouraging throughout the whole duration of the project. Special thanks to Mr. Hairi Bin Zamzuri for reviewing my thesis and providing valuable feedback.

Finally, I would like to thank my family for their unconditional love and support. Their helps are greatly appreciated.

ABSTRACT

The need for the future mobile communication system is to desired high-speed data, video and multimedia traffic as well a voice signals. The technology to fulfill is known as the Third Generation (3G) Mobile Systems. Therefore, from analog technology, there is now Wideband Code Division Multiple Access (WCDMA) for digital technology to fulfill 3G eras.

This thesis analyzes Multi-user effect and determines BER in WCDMA systems using Matlab 5.3.1. The engine model is constructed using block in Simulink Library and fulfill characteristic of WCDMA systems. Gaussian Approximation defined multi-user effect to the systems and used to determine the bit error rate in CDMA, multiple access, and communication systems [1]. Multi-user effect and BER are evaluated at different data rates for multimedia signal.

TABLE OF CONTENTS

CHAPTER	DESCRIPTION	PAGE
	Acknowledgement	I
	Abstract	II
	Table of Contents	III
	List of Figures	V
	List of Tables	VII
	List of Abbreviations	VIII
I	INTRODUCTION	
1.1	Introduction	1
	1.1.1 First Generation Mobile Systems	1
	1.1.2 Second Generation Mobile Systems	2
	1.1.3 Third Generation Mobile Systems	3
1.2	Project Overview	5
1.3	Objective	5
1.4	Scope of Work	5
1.5	Outline of Thesis	6
II	MOBILE COMMUNICATIONS RADIO SYSTEMS	
2.1	Simulink	7
2.2	Communications Blockset	7
2.3	Multipath Propagation	9
2.4	Pseudorandom Sequence (PN)	10
2.5	Direct Sequence Spread Spectrum (DS-SS)	10
2.6	Performance of Direct Sequence Spread Spectrum	12
2.7	Gaussian Approximation for Spread Spectrum CDMA	14
2.8	Offset QPSK	16

III	SIMULATION FOR BIT ERROR RATE (BER)	
3.1	Introduction	19
3.2	Simulation for Bit Error Rate (BER)	19
IV	RESULTS AND ANALYSIS	
4.1	Bit Error Rate	28
4.2	Bit Error Rate at Multimedia Signal	34
4.3	Effect of SNR to BER	37
4.4	Effect of Multi-User to BER	37
V	CONCLUSION AND FUTURE DEVELOPMENT	
5.1	Conclusion	43
5.2	Future Development	43
	REFERENCE	45
	APPENDIX A
