**Thesis submitted in fulfillment of the requirements for
Bachelor of Computer Sciences (Hons.)
Faculty of Computer and Mathematical Sciences**

January 2017

ACKNOWLEDGEMENT

Alhamdulillah, praises and thanks to Allah because of His Almighty and His utmost blessings, I was able to finish this project within the time duration given. Firstly, my special thanks go to my supervisor, AP Dr. Mazidah Puteh for advising and guiding in doing this project. A thank you to my CSP650 lecturer, AP Dr. Hamidah Jantan for guiding and helping us by provide the guidelines to do this project.

Special appreciation also goes to my beloved parents for supporting me, giving advices and motivation until I finish my research successfully.

Last but not least, I would like to give my gratitude to my dearest friends for helping me in doing this project and for those who are directly or indirectly involved in my project. Thanks again.

ABSTRACT

The eyesight is one of the important senses in human to perform daily activities. The untreated eye's problem can lead to blindness and serious eye diseases such as glaucoma and cataracts. Nowadays, people are not aware with their eye's conditions and thought it is just temporary problems and not important to take care about. They only realize when their eye's condition has become worst. So, it is difficult for the doctors to diagnose the problems when their eye's condition became worst. Therefore, in order to provide the excellent eyesight's problem care, it needs an intelligent diagnostic of the eyesight to detect the classification of eyesight diseases. This study aims to implement the classification algorithm using the Improved Clonal Selection Algorithm (ICLONALG) to classify the eyesight's problems. The principle of ICLONALG is to select the best cells to be cloned and mutated by calculating similarity measurements of the most competent cells. The improvement of ICLONALG applied is creating memory cells by dividing the datasets into local group of k -size so that each dataset belongs to at least a group and calculating the center of each group that will be selected to the next process but still used the same cloning and mutation process. In this paper, ICLONALG is implemented to classify the eyesight problems and provide a prototype to diagnose the eye diseases. The data used is collected from the survey of patients in Hospital Sultanah Nur Zahirah which has thirteen parameters of symptoms for eye diseases. The implementation of the algorithm has several step and process to take which are discussed in details in this paper. This system will ease the users and the doctors especially the new doctors to check on the eye diseases. This system is evaluated by calculating the accuracy of the classification of the eye's diseases. The result showed 50% in accuracy and gives the classification of the eye diseases that the user has suffered where the eye diseases can be classified into four types of eye diseases. For the future work, this experiment could be proceeding by adding more types of eye diseases that can be diagnosed.

TABLE OF CONTENTS

CONTENT	PAGE
SUPERVISOR APPROVAL	ii

ACKNOWLEDGEMENT	iv
ABSTRACT	v
TABLE OF CONTENTS	vi
LIST OF FIGURES	ix
LIST OF TABLES	x
LIST OF EQUATIONS	xi
CHAPTER ONE : INTRODUCTION	1
1.1 Background of Study.....	1
1.2 Problem Statement	2
1.3 Objectives.....	3
1.4 Scope	4
1.5 Significances	5
1.6 Research Methodology Framework	5
1.7 Summary	6
CHAPTER TWO : LITERATURE REVIEW	7
2.1 Introduction	7
2.2 Medical.....	7
2.2.1 Ophthalmology	7
2.2.2 Eye Disease.....	8
2.3 Artificial Immune System (AIS)	11
2.3.1 Technique.....	11

2.3.2	Negative Selection Algorithm.....	11
2.3.3	Immune Network Algorithm.....	12
2.3.4	Dendritic Cell Algorithm	12
2.3.5	Clonal Selection Algorithm	13
2.4	Improved Clonal Selection Algorithm	13
2.4.1	Overview	13
2.4.2	Clonal Selection Theory	13
2.4.3	Technique.....	16
2.5	The Similar Algorithm Used in Other Area	17
2.5.1	An Automatic Voltage Disturbance Classification System Based on Clonal Selection Algorithm	17
2.5.2	Headache Disease Diagnosis by using the Clonal Selection Algorithm	18
2.5.3	An Immune Inspired Approach for Breast Cancer Classification	18
2.5.4	Clonal Selection Algorithm for Classification.....	19
2.6	Previous Research on the Eyesight Disease	21
2.6.1	Implementasi dan Perancangan Sistem Pakar untuk Diagnosa Penyakit Mata pada Manusia Berbasis Pemrograman CLIPS.....	21
2.6.2	Diagnosis of Poor Eyesight based on Support Vector Machine and Artificial Neural Network.....	21
2.6.3	Sistem Pakar untuk Diagnosa Penyakit Mata pada Manusia.....	22
2.6.4	An Expert system for Diagnosing Eye Disease using CLIPS.....	22
2.7	Diagnosis of Eyesight using Improved Clonal Selection Algorithm	24
2.8	Summary	25

CHAPTER THREE : METHODOLOGY..... 26

3.1	Introduction	26
3.2	Research Methodology.....	26
3.3	Research Methodology Framework	27
3.3.1	Preliminary Studies	29
3.3.2	Data Collection and Preparation Phase.....	29
3.3.3	System Design and Implementation Phase	31
3.3.4	Evaluation Phase.....	41
