## **Abstract**

This study attempts to determine the most pleasurable programs offered by the Persatuan Ibu Tunggal Pantai Barat Selatan Sabah towards single mothers and to compare the perception of education background between graduated and non-graduated single mothers with program offered in the association. All two programs created for benefits of single mothers being examined the usefulness of these programs. The questionnaire survey is conducted one week period after Hari Raya Festive this year. The Cronbach Coefficient Alpha will be used to test the construct reliability. Descriptive statistics will be used to conduct the frequency analysis between most the perception of them towards the program. The chi-square test used to see the correlation between program created towards single mothers and the respondent's background. The results of this study might be used to improve the program offered in the association in order to help most single mothers especially in Sabah state.
