Final Year Project Report Submitted in
Partial Fulfilment of the Requirements for the
Degree of Bachelor of Science (Hons.) Plantation Management and Technology
in the Faculty of Plantation and Agrotechnology
Universiti Teknologi MARA

JULY 2019

ACKNOWLEDGEMENTS

Alhamdulillah, praise to Allah the Almighty. First and foremost, I am very grateful to the almighty ALLAH S.W.T for letting me to persue my Final Year Project and give me strength that need in order to fulfil my duty as a Plantation student. I would like to express my deepest appreciation to all those who provided me the possibility to complete this research.

Here, I wish to express my sincere appreciation to my supervisor, Madam Nur Farhamizah Binti Askarali for encouragement, guidance, suggestions, critics and friendship throughout finishing this project.

Thanks also to all of the kind lecturers in Bachelor of Plantation and Management for their accommodation, suggestion and opinion during the project progress in university. In particular, I would like to thank all the staff and technicians for their cooperation, indirect or directly contribution upon completing my research and also who gave the permission to use all required equipment and the necessary materials to complete this project.

Most importantly, special thanks also to my family for my external support when I told them I wanted to continue my education and especially my friends for encouraging me to finish this project. Without their support the ideas could not been realized.

ABSTRACT

COMPARISON BETWEEN POPULATION DENSITY OF (Oryctes rhinoceros) IN OIL PALM UITM JASIN AND PEMBANGUNAN PERTANIAN MELAKA SDN. BHD (PPMSB)

The population of rhinoceros beetle (*Oryctes Rhinoceros*) were investigated in 2 different areas which is oil palm in UiTM Jasin and Pembangunan Pertanian Melaka Sdn. Bhd (PPMSB), only by using pheromone trap. The study was conducted because these studies want to know if this crop age contributes to the population of a rhinoceros beetle. The objective of this study is to identify the different of rhinoceros beetle number between 2 different areas and their potential threat. The method, 4 pheromone traps was installed in each area. 1 trap can cover 2 hectare, for oil palm Uitm Jasin are only 18 acre, while at PPMSB there are also 18 acres. The data was collected twice a week about 5 weeks. Pembangunan Pertanian Melaka Sdn Bhd has large number of rhinoceros beetle which is 103 while the lowest is oil palm Uitm Jasin area, which is 49. The conclusion is population rhinoceros beetle highest at the Pembangunan Pertanian Melaka Sdn Bhd (PPMSB) due to the *Oryctes rhinoceros* behaviour itself that preferred to feed on the young palm as much different in term of the palm tree growth and physical characteristic.

Keywords: population of rhinoceros beetle, pheromone trap, oil palm, crop
