ABSTRACT

Precision agriculture has been developed for assisting farmers in precise fertilizer application in Malaysia. The tractor-mounted N-sensor with Active Light Sensor (ALS) has been introduced to utilization for monitoring N-status at the Malaysian paddy field. However, the application of this smart technology for other major crops such as oil palm has not been yet studied. Thus, the study was conducted to evaluate the precision operation of tractor-mounted Nitrogen ALS with manual and autopilot steering on the immature oil palm field in Malaysian oil palm plantation. In this study, the Nitrogen status on immature palms was identified and visualized by using tractor-mounted sensor “on-the-go” at every second while the tractor moving in the field. The data from N-sensor was analyzed based on Nitrogen uptake at 46 % for a normal requirement for immature oil palm. The interpolation maps of the Nitrogen status were developed by using the kriging method in ArcGIS 10.3 software and successfully shown the spatiality and variability of N-status on the immature oil palms. The maps can be used as a reference in applying variable rate application (VRA) to optimize the fertilizer usage for the oil palm. Besides that, the performance of manual and autopilot steering modes of the tractor-mounted N-sensor was also evaluated from the aspects of heart rate and human energy expenditure of the operator. The heart rate of the operator in driving with autopilot mode was 91 beats/min or 11.65% reduction as compared to 103 beats/min with manual steering mode. A similar reduction also occurred for the human energy expenditure of the operator in driving the tractor with autopilot mode. It was recorded that the human energy expenditure of the operator was 11.27 kcal/min when driving with autopilot steering mode or 33.27% lower than that manual steering mode of 16.89 kcal/min. The differences showed the autopilot steering mode can save energy of tractor operators or lighten the job during handling tractor. Generally, the findings can promote a real-time method in assessing Nitrogen status in Malaysian oil palm plantations and encourage variable rate application (VRA) to save fertilizer costs for strengthening the competitiveness and the sustainability of the oil palm plantation industry about 0.7 kg/ha @ 1.62% on field.

ACKNOWLEDGEMENT

First and foremost, I would like to thank God for allowing me to embark on my Master of Science and for completing this long and challenging journey successfully. My deep sense of gratitude, sincere appreciation and high indebtedness to a supervisor, Dr. Darius El Pebrian and co-supervisor, Assoc. Prof. Dr. Mohd Hudzari Haji Razali, Faculty of Plantation and Agrotechnology, Universiti Teknologi MARA Melaka campus Jasin.

I realized that this thesis could not be completed successfully without the assistance from Mr. Mohamad Fauzi Md Said and Mr. Hafizullah Hassan, the staff of Bengkel Perladangan Faculty of Plantation and Agrotechnology, Universiti Melaka campus Jasin. Special thanks to my partner, Mr. Mohammad Anas Azmi, Master of Science Faculty of Plantation and Agrotechnology, Universiti Teknologi MARA Melaka campus Jasin whose have contributed directly to the completion of this study. Thanks also were extended to the staff of Sime Darby Kempas Estate, Melaka for permitting us to conduct the field test on the immature oil palm field in realizing my project.

Finally, this thesis is dedicated to the loving memory of my dear late mother, Hajah Harizah Tengah and father, Mohammad Che Moh for the vision and determination to educate me. Also, the sibling who never stops for their unfailing prayer, encouragement, sacrifices and dedicated efforts to educate me up to this level.

Last but not least, thanks to all those, who are not mentioned here for their contribution to complete this study

TABLE OF CONTENTS

CONFIRMATION BY PANEL OF EXAMINERS	ii
AUTHOR'S DECLARATIONS	iii
ABSTRACT	iv
ACKNOWLEDGEMENT	v
TABLE OF CONTENTS	vi
LIST OF TABLES	ix
LIST OF FIGURES	xii
LIST OF SYMBOLS	xv
LIST OF ABBREVIATIONS	xvii
CHAPTER ONE: INTRODUCTION	1
1.1 Background of The Study	1
1.1.1 Industrial Revolution	2
1.1.2 Automate Steering System	3
1.1.3 Remote Sensing	3
1.2 Problem Statement	4
1.3 Scope and Limitation of Study	6
1.4 Objectives of Study	7
CHAPTER TWO: LITERATURE REVIEW	9
2.1 Precision Agriculture in Oil Palm Industry	9
2.2 Nitrogen of Soil Compaction and Soil Moisture	17
2.3 Review of Analysis for Nitrogen Status	21
2.3.1 The N Cycle	21
2.3.2 Methods to Identifying the Nitrogen Status in Plants	22
2.4 Review of Display Mapping by Using GIS Concept	30
2.5 Human Energy Expenditure and Cost in Operation	37
2.6 Summary	40

CHAPTER THREE: METHODOLOGY	41
3.1 Location of Study Area	42
3.2 Field Experimental Design	43
3.3 Machinery and Equipment	44
3.3.1 Specification of Tractor	45
3.3.2 Specification of Autopilot Mechanism	47
3.3.3 Description of N-sensor	48
3.4 Data Processing	50
3.4.1 Procedure on How Mapping by Using Sensor Office Website	54
3.4.2 CardWriter	54
3.4.3 Data Processing Using ArcGIS Software	54
3.5 Measure Soil Moisture and Soil Compaction Analysis by Penetrologger	55
3.5.1 Fieldwork Plan	56
3.5.2 Operation of the Penetrologger	57
3.6 Human Energy Expenditure	57
3.6.1 Specification of Polar RS800CX	58
3.6.2 Procedure on How to Operate Polar RS800CX	58
3.6.3 Details of Average Heart Rate, The Human Energy Expenditure of Operator Between Manual Steering and Autopilot Steering Modes	59
3.7 Field Performance And Cost Analysis	59
3.7.1 Field Performance of Tractor in Manual and Autopilot Steering Modes	59
3.7.2 Cost Analysis for Tractor and Yara ALS	60
CHAPTER FOUR: RESULT AND DISCUSSION	69
4.1 Mapping Nitrogen, As-Applied And Biomass Status at Immature Oil Palm	69
4.1.1 Relationship of Map Nitrogen, As-Applied, Biomass and Elevation on Manual Steering Mode	72
4.1.2 Relationship of Map Nitrogen, As-Applied, Biomass and Elevation on Autopilot Steering Mode	77
4.2 Nitrogen Analysis of Soil Moisture and Soil Compaction on Manual and Autopilot Steering Modes	83
4.2.1 Descriptive Analysis of Soil Compaction on Nitrogen at Manual and
