

STRENGTH ANALYSIS OF A DRINKING GLASS BOTTLE

SUSAZLIN BAHARUDIN

(99520469)

A thesis submitted in partial fulfillment of the requirements for the award of Bachelor Engineering (Hons) (Mechanical)

Faculty of Mechanical Engineering Mara University of Technology (UiTM)

OCTOBER 2002

ACKNOWLEDGEMENTS

First, I am very thankful to Allah the most Beneficial and the most Merciful for His guidance in making this final year project a successful. I would also like to convey my gratitude and appreciation to my respected project advisor Prof. Madya. Ahmad Kamil Hussain, without him I might not be able to produce and present this final year project successfully. I would also like to thank him for his support and valuable guidance for the past year. Not to forget to En. Mohd. Zaid Othman from SIRIM for his kindness to help and guide me and my partner to use the Coordinates Measuring Machine (CMM) and the Universal Testing Machine (UTM). A special thank also to my beloved family and friends for their kind help and moral support, not only in my study, but in my life as well. Lastly, I am very grateful to take this opportunity to give credits to the Faculty of Mechanical Engineering and Mara University of Technology (UiTM), the place where I have transformed into a more knowledgeable person in past three years. Last but not least, I hope this report would contribute some knowledge in the field of strength analysis of a glass bottle.

ABSTRACT

Finite Element Method has rapidly become a vital tool for analysis in structural designs. This method is extremely powerful in terms of the many different types of problems it can solve. This thesis presents the analytical evaluation of the strength of a drinking glass bottle. Finite Element Method is used to predict the location of the failure of the bottle when it is subjected to a compressive load. The result from the analysis using LUSAS software will be then verified by performing a series of compression testing. Propagation of cracks will be explained using fractography techniques. The method presented here can also be applied for other bodies of revolution.

PAGE

CHAPTER I INTRODUCTION

1.1	Background of Project	1
1.2	Scope of project	2
1.3	Objective	3

CHAPTER II INTRODUCTION TO A GLASS BOTTLE

2.1	Definition	5
2.2	Raw Materials	5
	2.2.1 Important Mineral	6
2.3	Properties of Glass	7
	2.3.1 Thermal Properties	7
	2.3.2 Chemical Durability	8
	2.3.3 Mechanical Properties	9
	2.3.4 Elastic Properties	9
	2.3.5 Strength of Glass	9
	2.3.6 Static Fatigue	10
2.4	Composition and Colors Used for Glass Bottle	11
2.5	Regulatory Requirement	
	2.5.1 Food and Drug Administration (FDA)	12
	2.5.2 Voluntary Product Standards (VPS)	12
2.6	Stress and Deformation of a Bottle	13
	2.6.1 Stress and Strain Definition	13

CHAPTER III THE FINITE ELEMENT ANALYSIS

31	Gener	al Overview	19
32	Analytical Procedure		
33	Modelling		10
3.3	2 2 4	Introduction	20
	J.J. I		20
		3.3.1.1 Modelled Coordinates	23
	3.3.2	Modelling: Features	24
	3.3.3	Modelling: Attributes	25
		3.3.3.1 Defining the Mesh	25
		3.3.3.2 Defining the Thickness	25
		3.3.3.3 Assigning the Surface Mesh and	
		Thickness to the Glass Bottle	25
		3.3.3.4 Defining the Material	26
		3.3.3.5 Support Conditions	26
		3.3.3.6 Loading	26
	3.3.4	Running the Analysis	27
	3.3.5	Viewing the Results	28
3.4	Resul	t	29

CHAPTER IV INDENTATION FRACTOGRAPHY

4.1	Introduction	31
4.2	Indentation as Controlled Flaws in Strength	
	Analysis	32
	4.2.1 Crack Morphologies in Failure	32
4.3	Fracture of Glass Containers	
	4.3.1 Introduction	34
	4.3.2 Load and Stresses	34
4.4	Fracture Diagnosis Techniques	
	4.4.1 The General Principles of Fracture	
	Diagnosis	36
4.5	Fracture Pattern	41
	4.5.1 Compressive	41

CHAPTER V EXPERIMENTAL EVALUATION

5.1	General Description of the Universal	
	Testing Machine	44
5.2	Methodology of Testing Analysis	46
	5.2.1 Crosshead Speed	47
	5.2.2 Full-scale Load Range	47
5.3	Capability of Universal Testing Machine	48
5.4	Compressive Test	48
5.5	Result	50
