CONFIRMATION BY PANEL OF EXAMINERS

ACKNOWLEDGEMENT

Alhamdulillah, all praised to Allah, with His permission, I managed to completed my final year project and thesis very well and self satisfied. Here I am very blessed and thankful to all the who was willing to assist and support my work from the early phase till the end.

First and foremost, I would like to express my sincere gratitude to my supervisor LAr. Zul Azri Aziz for his continuous support, patience, motivation, enthusiasm, and immense knowledge in completing my degree study and research. His guidance helped me in all the time of research and writing of this thesis.

I am also deeply thankful to my studio lecturers, LAr. Zalina Jaal Wahab, LAr. Nurhayati Abd Malek, LAr. Siti Zabeda Mohammad, LAr Sharifah Khalizah Syed Othman Thani, Lar. Zul Azri Abd Aziz and LAr Ahmad Nadzri Mohammed Alias, for their encouragement, insightful comments and their endless support and guidance over these whole months of semester.

Besides that, I would like to thank you to all those with whom I have had the pleasure to work with during this project been doing, especially the authorities, Bukit Jalil and Faculty of Architecture Planning and Surveying (FSPU) UiTM Puncak Alam for their cooperation in giving of so much information to complete my final year project and thesis writing.

Furthermore, this work would not have been possible without the support, helped, positive energy and advices from my fellow studio mates. Last but not least, nobody has been more important to me in the pursuit of this project than the members of my family. I would like to thank you to my parents, whose love and supporting me spiritually throughout my writing thesis and my life in general.

In overall, thank you so much to everyone who had involved together with me in completing my final year project and thesis writing. May the Almighty God richly bless all of you.

ABSTRACT

The Malaysian urban river corridor faces huge on physical transformation. The river is rich with ecosystem and bases of life which providing so many ecological life system functions to the existence of nature also human systems. However, due to the bad management on public interfere. In rapid transformation development and urbanization have also give an impact and it caused a pollution in environment in any circumstances, where the governance does are largely focused on the management of of water quality from water pollution. Besides that, the impact of rapid growth contribute by major industrial sectors, commercial bases and tourism development. The political situation and the lack of consideration of ecological situation in the design solutions has cover up environmental constraints and inflexible cultures of its landscape character and their ecological system. Hence, the landscape design process and its water quality is essential to protecting the significant of these places. This paper delivers a brief overview to addressing the important gap and thereby serves to underwrite to the literature review.

CHAPTER ONE

INTRODUCTION OF TOPIC

1.0 INTRODUCTION

In this chapter will explain what aspect of the public open space in urban riverfront, the main problem statement be highlighted in the site study, aim and objective of the project, the definition terminologies of keyword, the scope of study and whereby the flow research methodology that attracts audience to understand overall of research and also the foundation based of research.

In the context of European integration, networks are becoming increasingly important in both social and ecological sense. Since the beginning of the 1990s, societal and scientific exchanges are being restructured as the conceptual approaches towards new nature conservation strategies have been renewed. River network has both ecological and social benefits for urban urban development which is economic, physical and social. However, river networks have suffered extensive destruction as a result of urbanization and industrialization (Li, Shang, Che, Yang, & Liu, 2014)The river is one of the most important passages of material cycling in the biosphere; they provide a range of ecosystem functions, such as regulation of climate, conservation of biological diversity and flood management. Additionally, rivers provide social
