ANALYSIS ON RISK MANAGEMENT OF SUB-STRUCTURE CONSTRUCTION

WAN AZMA BT WAN HASSAN

(2004110574)

BACHELOR OF BUILDING SURVEYING (HONS)

NOVEMBER 2006

ABSTRACT

In the construction field there is a lot of uncertainty risk that occur either before, during or after the construction period. We cannot avoid the risk from happen, but we can reduce the risk to the minimal point, so that no major injuries would occur either to the public or to the company itself.

Sometime the risk that happened during the construction period affected not only to the project itself but also can affect the other properties such as the surrounding buildings if the method of the construction is not properly planned and selected. Any wrong decisions making during the construction period will give some impact to the project even it just a small decision.

The aim of this final project is to study the risk management implementation in the construction field and to identity the major risk that usually occur in the construction field. So, to support this research, two (2) on going projects have been selected and taken as case study.

From this research, hopes that it would gives clear perception to the reader for those who never implement the risk management in the construction.

ACKNOWLEDGEMENTS

Bismillahirrahmanirrahim....

Thanks to The Mighty ALLAH S.W.T

Grateful acknowledgement is made to my supervisor Puan Suliahti bt Hashim, lecturer of Faculty of Architectural, Planning And Surveying, UiTM Shah Alam for her inspiring guidance, Project Manage En. Mohd Mustaffa bin Abdul Hali, Site Engineer En. Wandi bin Ahmad, Site Supervisor En. Zulkifli Mad Napiah and Wan Afindi Wan Semail for their kindness and commitment.

Special thanks to my husband and parents for their encouraging and spiritual support. And last but not least, I wish to record my highest appreciation to those who have helped me in one way or another in making this proposal reality.

'May ALLAH S.W.T Bless Us'
