UNIVERSITI TEKNOLOGI MARA

BCM444: CONSTRUCTION TECHNOLOGY II

Course Name (English)	CONSTRUCTION TECHNOLOGY II APPROVED
Course Code	BCM444
MQF Credit	4
Course Description	The general aim of the course is to provide sufficient knowledge and understanding of basic principles in building construction and materials. The course covers the element of staircase, roof structures, finishes, timber building, steel building, basement and materials, with emphasis on the technology and installation of the element.
Transferable Skills	Construction Technology skill Teamwork skill Information management skill Communication Skill
Teaching Methodologies	Lectures, Blended Learning, Lab Work, Studio, Field Trip, Presentation
CLO	CLO1 Determine various building system and material application on low rise building construction. CLO2 Identify various building system and material application on low rise building construction. CLO3 Evaluate the sequence installation and material properties involved on the building construction. CLO4 Interpret visual building information through appropriates technology devices.
Pre-Requisite Courses	No course recommendations

Topics
1. Foundation Construction System 1.1) Fundamental of foundation on low rise residential 1.2) Foundation requirement 1.3) Types of foundation 1.4) Foundation construction 1.5) Considerations of Sustainable Foundation System 1.6) Innovative Techniques:
2. Floor Construction System 2.1) Introduction 2.2) Heavy Timber Frame Construction 2.3) Light Timber Frame Construction 2.4) Steel Frame Construction 2.5) Concrete Construction 2.6) Considerations of Sustainable Floor System 2.7) Innovative Techniques
3. Wall Construction System 3.1) Introduction 3.2) Heavy Timber Frame Construction 3.3) Light Timber Frame Construction 3.4) Steel Frame Construction 3.5) Concrete Construction 3.6) Brick Masonry Construction 3.7) Concrete Masonry Construction 3.8) Considerations of Sustainable Wall System 3.9) Innovative Techniques

4. Roof structures and finishes
4.1) Introduction
4.2) Types of roofs
4.3) Heavy Timber Frame Construction
4.4) Light Timber Frame Construction
4.5) Steel Frame Construction
4.6) Concrete Construction
4.7) Considerations of Sustainable Roof System
4.8) Innovative Techniques

5. Opening System
5.1) Introduction
5.2) Types of opening systems
5.3) Opening Construction Method
5.4) Considerations of Sustainable Opening System
5.5) Innovative Techniques

6. Staircase System
6.1) Introduction
6.2) Types of staircase systems
6.3) Staircase Construction Method
6.4) Considerations of Sustainable Staircase Systems
6.5) Innovative Techniques

7. Timber
7.1) Macro and Micro structures of hardwoods and softwoods
7.2) Conversion, seasoning, preservation and grading of timber
7.3) Effect of moisture content on strength and dimensional stability and decay
7.4) Effect of density, grain directions and defect on strength
7.5) Application of timber in construction industry

8. Polymers
8.1) Definition
8.2) Types of Polymers; thermoplastics, thermosetting plastics and elastomers.
8.3) The effect of plasticizers and fillers
8.4) Properties of Polymers; strength, behaviour in fire, thermal conductivity, electrical properties, thermal movement, moisture movement and durability
8.5) Application of polymer products in building industry

9. Bituminous Products
9.1) Types of bituminous products
9.2) Properties of bituminous products
9.3) Application of bituminous products in construction industry

10. Metal
10.1) 1.General properties
10.2) 2.Ferrous Metal
10.3) Comparison of the composition
10.4) Micro-structure and properties of cast iron
10.5) Mild steel, high carbon steel and stainless steel
10.6) Their uses as structural, reinforcing and pre-stressing steels and other uses in building industry
10.7) 3.Non-Ferrous Metal
10.8) Comparison of the composition and manufacture
10.9) Properties and uses of aluminium, copper, zinc and their alloys in building industry

11. Materials Laboratory Work
11.1) The objectives of laboratory work are to expose the students to common tests on building materials for use in or off site quality control.
11.2) -Brick/Blocks
11.3) Brick production and layering
11.4) Test to determine the compressive strength of bricks/blocks
11.5) Wood
11.6) Simple connection system
11.7) Test to determine the bending strength, crushing strength and stiffness of wood

12. Structural drawing & Autocad Drawing
12.1) Plan
12.2) Foundation details
12.3) Beam details
12.4) Column details
12.5) Floor details

Assessment Breakdown	%
Continuous Assessment	40.00%
Final Assessment	60.00%

Details of Continuous Assessment

Assessment Type	Assessment Description	% of Total Mark	CLO
Group Project	assessment of assignment will be done for the whole syllabuses. The evaluation will consists of the method of construction and the materials technology.	20%	CLO3
Lab Exercise	Assessment of student in doing testing of materials. Evaluation will be done on the method of procedures.	15%	CLO4
Test	Assessment from Chapter 1-2	5%	CLO2
