ACKNOWLEDGEMENTS

Assalamualaikum w.b.t

Praise to Almighty Allah S.W.T the most gracious and the most merciful, for His blessing that give me healthy physical and mental to finish up this final year project within the given time.

My special thanks also to my project advisor; Mr. Amran Bin Shafie whose willingness to give and contributed his knowledge, effort and valuable time until the submission of this final paper. His support, suggestion and criticisms also contributed a lot in the completion of this project.

My thanks also go to all staffs of Wood Department, Universiti Teknologi MARA Jengka Campus, Pahang. Without their help, support and contribution, this project cannot run smoothly and complete. Last but not least, all my family and friends that always give me support physical and mentally.

For all peoples that always give me strength. For all of your kindness, I really appreciate it. May Allah bless you all.

Thank you so much.

3.3.2	Apply the coating material	32
3.3.3	Drying	33
3.3.4	Testing	34

CHAPTER 4 RESULT AND DISCUSSIONS

4.1	Comparison types of oil palm trunk by adhesion test	36
4.2	Comparison types of oil palm trunk by roughness test	38
4.3	Comparison types of oil palm trunk by pencil hardness test	39
4.4	Comparison types of acid catalyst coating layer by adhesion test	40
4.5	Comparison types of acid catalyst coating layer by roughness test	41
4.6	Comparison types of acid catalyst coating layer by hardness test	42

ABSTRACT

PROPERTIES OF ACID CATALYST LACQUER ON OIL PALM TRUNK SURFACE (*Elaeis guineensis*)

The finishing properties of AC(acid catalyst) lacquer and treated and untreated oil palm trunk surface have been studied. The oil palms have been dried by using ethanol and acid catalyst have been applied on its surface. The result show the increase in adhesion and surface roughness test for treated oil palm but its decreased in pencils hardness compare to untreated oil palm. The same trend happened for single layer to double layers of AC surface coating.
