En. Noor Azam Bin Yahaya

Faculty Coordinator

Dr. Sr. Hj. Hayroman Bin Ahmad

ABSTRACT

Quality is one of the most important factors in building construction. Nowadays, most of the contractors in Malaysia not really care about the quality aspect in building construction. There are many projects of building construction already completed and anytime can transferred to the consumers but there are a lot of complaints related to building quality were received from the purchaser. The main reason for this problem is not having of standard inspection or checking to assess the quality of building when the building is completed. An observation was conducted to determine the level of the quality construction work during the process of practical training. The main focus of this observation is to get as much as possible information about the level quality of construction. The factor that was influenced quality of the construction was determined. From the factors, the main area problem that was usually highlighted during construction work is the concrete quality. The result of the observation has shown that the quality level of the construction work in this project is moderate level.

ACKNOWLEDGEMENT

First of all, praise to Allah for fifth months I undergo my practical training that begin on 12 November 2012 until next year 12 April 2013, I finally successfully completed my practical training report.

Through this, I would like to take this opportunity to thanks our lecturer DBN 307, Pn. Jamiah Tun Binti Jamil who had shown so many guides and give me a lot of advices and brilliant ideas and willing to spend their time to finish this practical training report. Not to be forgotten, our thanks to the Manager UDPS Sdn Bhd, Encik Ahmad Shah Ruzip and Project Manager, Muhamad Haikal Rosman who giving me a lot of cooperation to spend their time everyday that willingness to give some explanation and information about the flow of the material is manage at the site project and how the infrastructure work is running. Besides, thanks to the contractor, Mr. Stephen Lim that always helps me in completing this report related to material management. I also would like thanks to my friends who had given and sharing information regarding on the material that was order from the factory until the material kept at the site in order to complete this practical report.

Last but not least, I would like to appreciate to my parents and family for their supporting on my study and also give me a lot of moral and financial support to complete this practical report.

CHAPTER 1

INTRODUCTION

1.1 Introduction

Construction industry is one of the most important industries in a developing country like our country, Malaysia. There are many of mega project until a few infrastructure projects was being build in Malaysia. All of these projects are a part of government planning project to become a great country in a year 2020.

Although our construction industries has a good development, but still has many problem related the quality of construction of the project that was build. Quality is one of the most important factors in construction. So, we must make sure the quality of construction every project according the specification that was verified. Usually, all these problems can be happen because of the most contractors in Malaysia is not really care about the quality aspect in construction (Utusan Malaysia, 13 February 2001). This is because they are hasn't responsibility in their self to make sure the project is running very well. The only solution to this problem is to have a better quality management for construction industry.
