ACKNOWLEDGEMENT

Foremost, I wish to count my blessings and thanked Allah S.W.T for providing me with the mental and physical faculties as well as other positive attributes notably perseverance to complete this challenging research paper. Special mention goes to my research advisor Madam Liyana Binti Yousop for her guidance, supervision and support. Her constructive comments and suggestions greatly assist in the successful completion of this project paper.

I also take this opportunity to extend my appreciation to all those who have assisted in one way or another in the completion of this research paper. Sincere thanks to all my friends and office colleagues for their understanding, kindness, and moral support during the testing time to undertook complete this assignment. Last but not least, my deepest gratitude to my beloved parents for their unwavering support, invaluable assistance and sincere blessings.

Thank you.

ABSTRACT

Trade openness promotes the efficient allocations of resources through specialization and comparative advantage. A lot of countries nowadays apply trade openness because of the increase in total productivity and the exchange rate. Traditional trade employs a static framework while trade openness employs a dynamic framework. Static income effect from trade liberalization is low as compared to dynamic. Standard static trade theory generally predicts that trade policy has no effects on steady-state growth rate output. Larger trade implies greater openness that facilitates the economy adoptions of more efficient techniques of production, leading to faster growth of total factor productivity. The purpose of this study is to determine the effect of exchange rate, gross domestic product and export towards the trade openness in Malaysia which is the foreign direct investment by using quarterly time series data from year 2005 until 2014. The finding from this research shows that there is a relationship between export and trade openness.
