ABSTRACT

Enabling works is a must for a huge construction. This report will discuss the construction of Anti Climb Fencing along Persiaran Cakeralawa, Subang Bestari. The purpose of this report is to investigate the requirement resources to construct anti-climb fencing, the equipment, and material used. This report will focus on the problems encountered and the solution method during the work for each phase of construction. The purpose of this report is to investigate the requirement resources to construct anti-climb fencing, the equipment, and material used, and also to explain the procedure work before, during and after the construction. The main objective of the report is to illustrate the construction method of anti-climb fencing. Observation and interview session on site had been done as one of the methods to collect data and information in order to produce this report.

ACKNOWLEDGEMENT

It is always a pleasure to remind the fine people in the KLIA Engineer's for their sincere guidance I received to uphold my practical. I would like to convey my gratefulness to Mr Fakhru Affendi and his colleagues for the excellent on the job training which I have undergone in your company. The skills and knowledge which I have gained throughout my practical training I perceive as a very valuable component in my future career development. I would especially like to thank Mr Nazri, Mr Saharuddin for their generous support, coaching and companionship during my practical training. They share their expertise with me very generously and I have learned a lot from them. My thanks and appreciation also to administration staff mainly, Madam Rafizah and Ms Zafirah for willing to help me, and above all to your good companionship.

I express my sincere respect and gratitude to my supervisor lecture, Mr Muhammad Redza bin Rosman who has given his valuable support cooperation and suggestion from time to time in successfully completing my report. It helped me a lot towards the completion of this report because it gave me picture of what to write in the documentation of this project, I am so thankful for that. Besides, I wish to thank to Mr Muhammad Naim Mahyuddin, Practical Training Coordinators and Dr Ida Nianti bt Mohd Zin, Programme Chairman, for the guide during the training stint.

Last but not least, I wish to thanks my family and outside friend for the encouragement and motivation toward the completion of this report, is so helpful, first my family for financial matter from the first day until the end and outside friends for supporting each other daily.

Thank you so much.

CHAPTER 1.0

PREFACE

1.1 Introduction

There were many difference fencing options discussed at the workshop, along with choices that are friendly to organic operations. But the common message of the day was that no matter what the use of a fence might be, do not skimp when it comes to supplies or installation. “Good quality matters in fence,” Hendershot said. “Posts, wire, and all of the materials need to high quality because you want everything to last the life of the fence, which is ideally 30 years. It is extremely difficult to replace posts, especially if you have a whole series of them to replace. You want to avoid that extra work as much as possible” (Ty & Ohio, 2013).

Architect design many good protective fences and walls that are aesthetically acceptable. There are many type of fence such as wooden hoarding chain link fencing, metal hoarding, mesh panel fencing, palisade fencing and high security fencing and anti-climb fencing. As the main point of this construction is on safety, the anti-climb fencing from the Plytech Fencing System Industries was chosen. The choice of fence by the client depended on the security and privacy versus aesthetics and their budget. Anti-Climb Fence has a great security, keeping trespasser and other unwanted guests off their property.
