ABSTRACT

A numerical study is carried out to solve the heat and mass transfer analysis on flow of williamson nanofluid with thermal and velocity slips. The Buongiorno model is used to explore the heat transfer phenomena due to Brownian motion and thermophoresis. Using similarity transformations variables, the governing equations are reduced to a nonlinear ordinary differential equations (ODEs). These equations are then solved numerically via the Runge-Kutta Fehlberg Fourth-Fifth (RKF45) method. The outcomes of velocity slip parameter, thermal slip parameter, Williamson parameter, Prandtl number, heat capacitance ratio parameter, Lewis number, diffusivity ratio parameter and Schmidt number on velocity, temperature and concentration profiles are illustrated graphically and discussed. The results have revealed that the concentration profile decreases as the velocity slip and thermal slip factor parameters are increased. In addition, temperature and concentration are enhanced with the rise in Williamson parameter. The temperature profile is decreased as Lewis and Prandtl numbers are increased.

ACKNOWLEDGEMENT

First and foremost, I would like to express my gratitude to Almighty Allah to empowering me to complete this research during the time duration given and for blessing me with numerous incredible individuals around.

Furthermore, I pass on my genuine appreciation to Dr. Norhaslinda Binti Zull pakkal, Coordinator of Last Year Project and my regarded supervisor, Dr. Syazwani Binti Mohd Zokri for her direction in completing this project. Her guidance has helped me in all the hour of research and the composition of this thesis. Without her valuable assistance, this undertaking would not have been finished.

My veritable appreciation additionally goes to my adored family members who have supported me financially and have given passionate encouragement to make it possible for me to complete this research. Without their persistent and consistent support, motivation and being around through my good and bad times, this project would not have been finished inside the time term given. Then, I would like to express my appreciations to my colleagues for sharing their knowledge and experiences during discussions.

Last but not least, I might want to express gratitude towards Universiti Teknologi MARA for giving me the opportunity to seek after my studies. I owe a great deal to everyone for their understanding, sacrifices, unwavering support and motivation that enable me to achieve my desires.
