The Online Teaching and Learning Materials Enhancement Workshop was organized by the Faculty of Computer Science & Mathematics (FSKM), UiTM Negeri Sembilan Kampus Kuala Pilah from June 1 to June 2, 2022. During this session, we will be concentrating on the development of the materials for the Massive Open Online Course (MOOC) for MAT016.

On that day, lecturers who were participating in the development of this MOOC were given step-by-step instructions on how to stage their planning and implementation of the project. A number of different programmes, including Quizizz, Proprofs, Plickers, Edpuzzle, Wordwall, and Genially, are utilized by content developers during the process of material preparation. The first and second sessions were facilitated by Norul Fadhilah Ismail and Mahfuzah Mahayadin, lecturers from Mathematics Department. Figure 1 shows participants who attend the workshop and Figure 2 is a screenshot of the e-content of MAT016 on UFUTURE which has been developed.

CHAPTER 1
1.1 Measure of central tendency

Hello students.. 😊

Please watch the video prepared for this subtopic. Press pause if you require some time to understand the information or examples provided in the video.

And later, test your knowledge with a fun game/ activity you can find in this video.

Measures of Central Tendency

A measure of central tendency (also referred to as measures of centre or central location) is a summary measure that attempts to describe a whole set of data with a single value that represents the middle or centre of its distribution.
