ABSTRACT

The study investigates the effect of general election results on the performances of stock market using case from 14th General Election in Malaysia. This study used stock market daily prices as secondary data obtained from Bursa Malaysia and adopting event study methodology outlined by the MacKinlay (1997). The selected event is 14th General Election in Malaysia which had been held on 9th May 2018. The results of this research suggest that 2018 general election has effect on stock market performances but there is no differences on before or after general election as the abnormal return is insignificant.
