## ABSTRACT

Information Technology (IT) is perceived to play an essential role in organisational agility (OA), and often is regarded as an enabler for agility. The utilization of IT in providing organisation with sufficient information for rapid decision making for agility is the state-of-art strategy to works in today's turbulent business environment. Although beneficial, it is however apparent that the applications of these recent emerging and advance information technologies within organisation, could introduces IT related issues such as information security and cyber threats, rapid and continuous technological advancement and obsolescent that eventually inhibit organisations' agility. On the other side, several researchers found that practicing the information security management (ISM) could improve IT operational efficiencies and promotes OA. Looking at the possibilities of creating the conceptual links between ISM practices and OA as part of organisation strategy, this study focuses on the investigating the relationships between information security management ISM practices and OA of Multimedia Super Corridor (MSC)-status companies. A conceptual research model was first developed based on an extensive literature review, which then the final model was established and used to develop measures and instruments. A quantitative method research design has been employed in this research, which involved three phases of data collection methods, namely pre-testing and validity and reliability of instruments, pilot study and survey. This study was conducted throughout Malaysia with a total of 250 valid questionnaires were obtained from managers and executives from the MSC-status companies. Structured Equation Modelling (SEM) using Partial Least Square (PLS) was used to analyse the data and to test all nine hypotheses developed in this study. Based on the analysis of 250 responses, it was discovered that administrative security practices (ASP), technical security practices (TSP) and physical & environmental security practices (PESP) have positive influences on operational agility and customer agility, except the relationship between PESP on all OA dimensions were found to be insignificant on all agility constructs. The validation of the structural model of nine hypotheses developed for this study has demonstrated satisfactory results, exhibited six significant direct relationships, and three insignificant relationships. This research contributes to the existing literature as there has been little evidence found in the literature relating information security dimensions with organizational agility, especially in IT-based organisations. By considering the fairly high explanatory power the model, this study will benefit practitioners and policy makers of IT-based organisations on how information security practices could foster their organizational agility.

## ACKNOWLEDGEMENT

In the name of Allah, the Most Merciful and Most Compassionate. Peace be upon the Prophet. Foremost, praise to the Creator for providing me the inner strength and courage throughout this challenging task. It is also a pleasure to express my appreciation to those who have assisted me in one form or another in successfully completing this research.

My gratitude goes to my supervisors Associate Professor Dr Mohammad Noorman Masrek and Dr Mad Khir Johari Abdullah Sani for their continual guidance and support.

My sincere appreciation is also extended to Professor Dr Sohaimi Zakaria, Professor Dr Adnan Jamaludin, Professor Dr Mohd Sazili Shahibi, Dr Zaharudin Ibrahim, Dr Norhayati Hussin, Dr Abdul Rahman Ahmad, Dr Ahmad Zam Hariro and Pn Ramlah for their great assistance and continuous motivations. Without the assistance of these people, this thesis would never have been completed.

Many thanks go to my GRA, Mr Qamarul Nazrin Harun for his help in several stages of this research. I would like also to thank Mr Mohd Shamir Hashim and Mr Abd Rouf Mohammed Sayuti of Cybersecurity Malaysia for their willingness to share experience and knowledge related to this study.

I would like to acknowledge the Research Management Centre (RMC) UiTM, Shah Alam and Ministry of Higher Education Malaysia (MOHE) for the financial support of this research under the Fundamental Research Grant Scheme (FRGS) project code: FRGS/1/2015/SS03/UITM/03/8.

Also, not to forget friends, Dr Norizan, Dr Farrah Diana, Mr Yamin, Mr Ahmad Nazri, Dr Irni Eliana, Erlissa, Nora'ayu, Dr Shamila, Dr Zaidi and Dr Siti Arpah who helped me out in various possible ways. Thank you also goes to the staff of Faculty of Information Management, UiTM Puncak Perdana in assisting with the administrative matters of this research.

To my beloved parents (████████████████████) and Encik Zaini Abd Rashid, my sisters Nani, Nana and Ayin for their invaluable prayers and constant encouragement, thank you and Alhamdulillah.

Finally, I would like to acknowledge my deep appreciation to those who mean most to me; my beloved wife Zahirah and our daughters, Iman, Ana and Ayra for their love, understanding, support and patience throughout this incredible journey.
