A REVIEW ON THE PREPARATION OF SUPERHYDROPHOBIC POLYETHYLENE AND THEIR APPLICATIONS

KHAIRUNNISA ZEKEFLI

Final Year Project Report Submitted in Partial Fulfilment of the Requirement for the Degree of Bachelor of Science (Hons.) Polymer Technology in the Faculty of Applied Sciences Universiti Teknologi MARA This Final Year Project Report entitled "A Review on The Preparation of Superhydrophobic Polyethylene and Their Applications" was submitted by Khairunnisa Binti Zekefli in partial fulfilment of the requirements for the Degree of Degree of Bachelor of Science (Hons.) Polymer Technology, in the Faculty of Applied Sciences, and was approved by

Dr. Siti Nor binti Din Supervisor B. Sc. (Hons.) Polymer Technology Faculty of Applied Sciences Universiti Teknologi MARA 02600 Arau Perlis

Dr. Dalina binti Samsudin Project Coordinator Faculty of Applied Sciences Universiti Teknologi MARA 02600 Arau Perlis Dr. Zuliahani binti Ahmad Head of Programme B. Sc. (Hons.) Polymer Technology Faculty of Applied Sciences Universiti Teknologi MARA 02600 Arau Perlis

ABSTRACT

A REVIEW ON THE PREPARATION OF SUPERHYDROPHOBIC POLYETHYLENE AND THEIR APPLICATIONS

Scientists have recently shown an interest in artificially mimicking naturally occurring superhydrophobic surfaces. There were several methods for creating the superhydrophobic surfaces, either through chemical, or physical approach. In this review, a few fabrication techniques of superhydrophobic polyethylene (PE) have been discussed such as phase separation, template, electrospinning, dip coating method, chemical etching and hot embossing. Some of the presented methods were found to be advantageous to the industry, while other methods were quite expensive. Apart from that, the applications of superhydrophobic PE were also mentioned in this thesis. Superhydrophobic materials were found to be useful for various applications due to their excellent anti-icing, anti-bacterial, self-cleaning and oil water separation.
