ABSTRACT

The effects of ionic radiation on MR219 Malaysian rice variety were assessed by characterising morphological variances under different water stress treatments. Three third mutant generation (M3) ionic mutant rice lines ML-3, ML-10 and ML-30 were tested under lowest (T1), moderate (T2), and highest water stress treatment (T3). Results indicated ML-30 performed significantly higher in terms of 100 grain weight and grain weight per plant in all three water stress treatments, while had similar performances compared to other rice lines in terms of flag leaf length, leaf length, number of leaves per plant, panicle length, number of panicles per plant and plant height. ML-30 was observed to performed significantly lower in terms of flag leaf width under the severest water stress treatment (T3). Genetic diversity assessment was conducted using MR219, MR219-4, Mardi Aerobic Rice (MRIA), ML-3, ML-10 and ML-30 by using 11 Inter-Simple Sequence Repeats (ISSR) primers. The average polymorphism produced by the 11 ISSR primers was 53.66%, which indicated high informativeness. Clustering analysis indicated that the mutant rice lines were differentiated genetically compared to their parental rice variety MR219, as evident by the construction of group A which consisted by only MR219 and group B which was occupied by other mutant rice lines. ML-30 and MR1A were clustered together in cluster II with high similarity (0.808), while MR219-4 was differentiated from the ML-3 and ML-30 with low similarity value of 0.707. ML-30 had potential to perform positively under water stress conditions, evident by the significantly higher 100-grain weights and grain weight per plant under all water stress treatments, and similar clustering with the aerobic rice variety MR1A. In conclusion, ionic radiation was proven to be effective in producing drought tolerant mutant lines. Ionic radiation also had an unexpected reaction that may produce susceptibility to water submergence in ML-30 line. The recommendations include increasing the number of ISSR primers, incorporate other genetic marker systems, and include biochemical analyses.

ACKNOWLEDGEMENT

First and foremost, I wish to thank God for allowing me to embark on my MSc and for completing this long and challenging journey successfully. My gratitude and thanks go to my supervisor Dr Shamsiah binti Abdullah.

Special thanks to Norsharina binti Mad Saad who provided molecular training in Agrobiotechnology Institute. My appreciation goes to the Director of Perbadanan Putrajaya Mohammed bin Salleh, who provided the facilities and assistance during the planting experiment.

Finally, this thesis is dedicated to my parents for their undying support throughout the years of my study.

ACKNOWLEDGEMENT	v
TABLE OF CONTENTS	vi
LIST OF TABLES	ix
LIST OF FIGURES	xi
LIST OF ABBREVIATIONS	xii
CHAPTER ONE: INTRODUCTION	1
1.1 Research Background	1
1.2 Problem Statement	2
1.3 Objectives of the Study	2
1.4 Scopes and Limitations	3
CHAPTER TWO: LITERATURE REVIEW	4
2.1 Gamma Radiation and Ion Beam	4
2.2 Rice Growth and Development	6
2.3 MR219 and Mutation Breeding	8
2.3.1 MR219 Characteristics, Advantages and Disadvantages	8
2.3.2 MR219-4 Characteristics and Method of Mutation Breeding	10
2.4 Methodologies of Imposing Water Stress Treatments	10
2.5 Inter Simple Sequence Repeat DNA Markers in <i>Oryza sativa</i>	13
2.5.1 ISSR Primer Sequences	14
CHAPTER THREE: RESEARCH METHODOLOGY	16
3.1 Evaluations of Rice Growth Performance	16
3.1.1 Experimental Site Survey	16
3.1.2 Plant Material	17

3.1.3	Experimental Design	17
3.1.4	Fertilisation Rate	18
3.1.5	The Imposition of Different Water Ponding Depths	18
3.1.6	Statistical Analysis	18
3.1.7	Grain Weight (100) and Grain Weight per Plant	19
3.1.8	Panicle Length, Number of Panicles per Plant and Plant Height	19
3.1.9	Flag Leaf Length, Flag Leaf Width and Leaf Length	20
3.2	Radiation Treatment	20
3.3	Inter Simple Sequence Repeats (ISSR) DNA Marker Assessments	21
3.3.1	DNA Extraction Methodology	21
3.3.2	Polymerase Chain Reaction	24
3.3.3	Melting Temperature Calculations	25
3.3.4	Agarose Gel Electrophoresis	25
3.3.5	Band Scoring and Descriptive Statistics	26
3.3.6	Molecular Data Preparation in MS-Excel and Entry	26
3.3.7	Construction of Similarity Matrix	28
3.3.8	Cluster Analysis and Construction of Phenetic Dendrogram	28
CHAPTER FOUR: RESULTS AND DISCUSSION		30
4.1	Morphological Measurements under Different Water Stress Treatments	30
4.1.1	Grain Weight (100) and Grain Weights per Plant	30
4.1.2	Panicle Lengths, Number of Panicles per Plant and Plant Heights	38
4.1.3	Flag Leaf Lengths, Flag Leaf Widths and Leaf Lengths	40
4.1.4	Number of Leaves per Plant	43
4.1.5	Null Survival Rates of MR219-4	43
4.1.6	Discrepancies in Data	44
4.1.7	Effects of Radiation Mutation Treatment on Rice	45
4.1.8	Correlation between Yield and Yield Components	45
4.2	ISSR DNA Markers Assessments on Mutant Rice Lines	47
4.2.1	Gel Documentation, Band Scoring and Descriptive Statistics	47
4.2.2	Similarity Matrix, Cluster Analysis and Phenetic Dendrogram	58
4.2.3	The efficiency of Radiation Mutagenesis	60
4.3	Potential Submergence Susceptibility in Mutant Line ML-30	61
