## **ACKNOWLEDGEMENT**

Alhamdulillah. In the name ALLAH S.W.T, the Most Gracious and Most Merciful, Praise to Allah Almighty for giving me the will and strength to complete this final year project report successfully.

The author like to take this opportunity to expresses special gratitude to project supervisor, Assoc. Prof. Wan Norainin Bte Wan Abdullah for her guidance, support and advice during this project is undergoing.

Behind this entire project, there are two main figures that had being my all time source of motivation who is my beloved parents, Ismail bin Hj. Abu Bakar and and also family members. They always give me support and never fail to inspire me every single time.

Last but not least, I would like to take this opportunity to express my gratitude to my highly valued best friends and to all who have been supportive and giving me courage, comfort and advice the course of this project.

Thank you very much,

***MUHAMMAD IZDIHAR BIN ISMAIL***

## **ABSTRACT**

This paper presents an analysis to mitigate harmonic in nonlinear load using three phase pulse width modulation (PWM) techniques with shunt active power filter. PWM signal and the voltage inverter are used with the shunt passive power filter (PPF) to reduce the value of total harmonic distortion (THD). The conduction mode angle of three phase PWM are varied from  $20^\circ$  to  $180^\circ$ . The advantages of PWM is the output voltage is nearly sinusoidal, better power factor and better transient response. The analysis is to observe that harmonic can be reduced comply with IEEE regulation standard. The simulation result was carried out using Matlab/Simulink R2012a.

## TABLE OF CONTENTS

DECLARATION	i
ACKNOWLEDGEMENT	ii
ABSTRACT	iii
TABLE OF CONTENTS	iv
LIST OF FIGURES	vii
LIST OF TABLES	ix
LIST OF ABBREVIATION	x

<b>CHAPTER</b>	<b>DESCRIPTION</b>	
<b>PAGE</b>		
1	INTRODUCTION	
	1.1 Background of Study	1-4
	1.2 Problem statement	4-5
	1.3 Objective and scope of the study	5
	1.4 Organizational of thesis	6
2	LITERATURE REVIEW AND THEORY	
	2.1 Introduction	6
	2.2 Harmonic	6-7
	2.3 Pulse Width Modulation	7-8
	2.4 Three Phase Inverter	8-10
	2.5 IGBT (Insulated Gate Bipolar Transistor)	11-12
	2.5.1 IGBTs Switching Characteristic	12

	2.5.1.1 Turn-on IGBT	13-14
	2.5.1.2 Turn-off IGBT	14-16
2.5	Shunt Passive Power Filter	16-17
2.6	Non-Linear Load	17-18
3	METHODOLOGY	
3.1	Introduction	19
3.2	Tool required	19
3.3	The project deliverables	20
3.4	Circuit design	20-21
	3.4.1 PWM Signal	22-23
	3.4.2 Inverter Circuit	24
	3.4.3 PWM With Inverter, Shunt PFF and Nonlinear load	25-27
4	RESULTS AND DISCUSSION	
4.1	Introduction	28
4.2	Single Phase PWM Signal	29
4.3	Three Phase PWM Signal	30
4.4	PWM Signal	31
4.5	Waveform $V_{\text{Phase}}$ and $V_{\text{LL}}$ of IGBT Inverter	32
