ACKNOWLEDGEMENT

Praise be to Allah the Al-Mighty for giving us the strength, courage, patience and ability in order to complete our research paper within the time given.

Firstly, I would like to take this opportunity to express deepest appreciation and gratitude to my project's supervisor, Madam Siti Zaitun Binti Saddam, who was being helpful and offered invaluable assistance throughout the completion of my research in order to enhance the quality of the final report. Her guidance and motivation in this project had made a great success of this research. I would also like to thanks to Madam Hafidzah for her willingness to act as my second examiner and for any comments and suggestions regarding my research project.

I also take this opportunity to extend my appreciation to all those who have assisted in one way or another in the completion of this research paper. Sincere thanks to all my friends and office colleagues for their understanding, kindness and moral support during testing time undertook to complete this assignment. Also, my deepest gratitude to my beloved parents for their unwavering support, invaluable assistance sincere blessings.

Lastly, I also would like to give thanks to the authorities of the University Technology Mara (UiTM) for the good facilities and study environment provided. Without a doubt, I perceive the emerging technology, which helped me during the process.

ABSTRACT

The purpose of this research is to investigate the determinants of personal bankruptcy in Malaysia. I want to proceed with more detail about this research because it is due to the increasing of personal bankruptcy cases from year to year especially 2016, 2017 and 2018 which involves 290,001, 300,958 and 303,415 cases (Malaysian Department of Insolvency, 2019). Some of Malaysian has issues in financial literacy and it will lead to grow in personal bankruptcy cases if there is less initiative to avoid it. Maybe mostly does not know how to manage their financial properly and be organizing. This research will create more awareness and give more information to Malaysian about the important of personal bankruptcy. Other than that, this research will be managed by four objectives which are to discover whether lending rate, non-performing loan, unemployment rate and gross national income will affect the bankruptcy cases in Malaysia. For research design, will be used secondary data analysis using time series data by yearly starting from 1988 until 2018 and it is consists of thirty one observations. Then, will be used descriptive analysis (stationary test and normality test), correlation analysis (autocorrelation test) and multiple regression analysis (T-test, F-test, test on assumption, test multicollinearity and hypothesis testing) method to measure the relationship between dependent variable and independent variables. The analysis is using E-Views software to determine the relationship between variables.
