## **Abstract**

Web based learning environment has been widely developed and adopted. Many of us use the internet or the "web" (World Wide Web) as a source of information. It is not easy to study searching and sorting algorithm with only refers to the text algorithm like in text books. This project is to develop a web based on searching and sorting techniques to improve the quality of study among the student in FTMSK UiTM. In sorting algorithm, we focused on quick sort, heap sort, merge sort, bubble sort, insertion sort and selection sort while in searching algorithm we focused on binary search and sequential search. The objectives of this project is to develop self-learning environment in learning searching and sorting algorithm, enhance understanding of student in learning searching and sorting technique and to apply web-based learning in computer science subject, which focus on courses that use searching and sorting algorithm.. Although there are many websites that teach searching and sorting algorithm by using animation but no websites can cover the UiTM syllabus. The deliverables of this project is web based learning for searching and sorting algorithm that covers the UiTM syllabus. So by developing this web based learning, we hope UiTM student especially, can get benefit from it.

## **Acknowledgements**

Alhamdulillah, praise to Allah S.W.T the Almighty for His help that enables this research entitle “Development of Web- based Learning Content of Algorithm Animation on Searching and Sorting” to finish on time. All stress and pressure has come to an end with the submission of this research. It is not an easy task but as the going gets tough the tough gets going. Throughout all the hard work I try to keep the pieces together and wrap things up.

First of all I like to thank my supervisor, Pn. Norasiah Bt. Mohammad for all the dedication and hard work of giving me the knowledge and guidance to make sure that everything is in the right order and the entire task is fulfilled. I also want to thank my lecturer in this course CSC633 (Proposal) and CSC699 (Final year project), Assoc. Prof. Dr. Naimah Mohd Hussin with all her idea and support.

Special thanks also go to all my friends who have been very supportive toward the completion of this project and making this projects a reality.

Thank you again.

Nur Linda Binti Abdi Nur,
