ACKNOWLEDGEMENT

Firstly, my greatest gratitude to Allah, for with his blessing I was able to finish my thesis. I would like to say thank you to my supervisor, Puan Nursuriati @ Liza Jamil, for teaching and guiding me trough the way to finish my project with patience and giving me good ideas and positive comments to make the system successfully developed. I would also like to say thank you to my external supervisor, Encik Kamarudzaman bin Jambi, for his full co-operation and guidance for me to build the system. To Puan Fariza Hanis, Puan Nor Hayati and Puan Wan Adilah, as system project panels, thank you very much.

My deepest gratitude to my family for their moral support in ensuring that I finished my work on time, especially my mom and dad. Special thanks to my friends, Maslina, Anidanita, Nor Masita, Nordiana and Shamsuriati which also give me support and contribute ideas for me to improve the system being developed. Last but not least, to everybody that had help me direct or indirectly, thank you for everything and may Allah bless all of you always.

ABSTRACT

This thesis proposed to develop a computerized system for a local company, Arus Wazir Sendirian Berhad, whose business nature is to provide supplies, services and construction materials to their customers. The company is still using the filing system to handle its daily business transaction. There are lots of problem occurring in storing data and therefore would require a computerized system to conduct their daily business operations. The Purchasing and Sales Management System for Arus Wazir Sdn. Bhd is expected to accomplish several objectives, which are to computerized the existing filing system of storing data, atomize the calculation of commission and payments. This system also will automatically produce invoices and reports based on transactions done between customers and suppliers. This system will provide a security of accessing database, which is only authorized user, can use the system. A technique used to develop the system is by using the Waterfall Model.
