ABSTRACT

The performance of a single-model (classifier) can be determined on the basis of the classification accuracy. However, it is difficult to determine which single-model is the best classification technique in a specific application domain since a single learning algorithm may not uniformly outperform other algorithms over various datasets. Furthermore, most classification algorithms, using either fuzzy or non-fuzzy approaches, produce results in the form of crisp or categorical classification outcomes. Moreover, in certain applications, the classification outcomes that represent class labels may involve categorisations which are fuzzy in nature. Therefore, this study aims to develop a new technique to handle the classification task based on combinative algorithms by adopting multiple-model concepts and Fuzzy Ordered Weighted Averaging (FOWA) operator. A fuzzy similarity measure for Generalized Trapezoidal Fuzzy Number (GTFN) based on distance and geometric shape characteristics, namely geometric distance, centre of gravity points, area, perimeter and height is proposed. The proposed fuzzy similarity measure is integrated in the proposed Fuzzy Classification technique based on Combinative Algorithms which is termed as FCCA. The performance of the proposed FCCA has been analysed and compared with the best single-models and the existing multiple-model technique using Domestic Water Consumption (DWC) dataset. The findings show that the proposed FCCA method consistently outperforms all selected single-models and performs better prediction performance than a statistical multiple-model approach, known as the Pool Method. These results indicate that the proposed FCCA technique has the potential to assist decision-making, especially in situations where it is difficult to decide which model is better for a specific classification problem and when it is difficult to decide selected unconfirmed cases.

ACKNOWLEDGEMENT

IN THE NAME OF ALLAH (AL MIGHTY), THE GRACIOUS, THE MOST MERCIFUL

Firstly, I am grateful to Allah S.W.T for giving me the strength and patience to complete this thesis successfully.

I would like to take this opportunity to express my gratitude and highly thankful to my supervisors Dr. Khairul Anwar Bin Rasmani and Dr. Nor Hashimah Binti Sulaiman for their encouragement, support, advice, and ideas in guiding me throughout this long and challenging journey until this thesis is completed.

Special thanks to my parents, Mat Saffie Bin Abdul Rahman and [REDACTED] for their support and prayers during the completion of this thesis. Thanks also to my family members, colleagues and friends for helping me with this study.

Finally, I hope that this study will be beneficial to others.

TABLE OF CONTENTS

	Page
CONFIRMATION BY PANEL OF EXAMINERS	ii
AUTHOR'S DECLARATION	iii
ABSTRACT	iv
ACKNOWLEDGEMENT	v
TABLE OF CONTENTS	vi
LIST OF TABLES	ix
LIST OF FIGURES	xi
LIST OF ABBREVIATIONS	xiii
CHAPTER ONE: INTRODUCTION	1
1.1 Background of Study	1
1.2 Problem Statements	2
1.3 Objectives of the Study	4
1.4 Scope of the Study	5
1.5 Significance of the Study	6
1.6 Organization of the Thesis	7
CHAPTER TWO: BACKGROUND THEORY AND LITERATURE	
REVIEW	8
2.1 Introduction	8
2.2 Fuzzy Sets Theory	8
2.2.1 Fuzzy Numbers Representation	11
2.2.2 Operation on Fuzzy Numbers	13
2.3 Fuzzy Similarity Measures	13
2.4 Fuzzy Ordered Weighted Averaging Operator	17
2.5 Multiple-Model Concept	18
2.6 Chapter Summary	23

CHAPTER THREE: SIMILARITY MEASURE FOR FUZZY NUMBER BASED ON DISTANCES AND GEOMETRIC SHAPE CHARACTERISTICS	24
3.1 Introduction	24
3.2 Analysis of Performance of Some Existing Fuzzy Similarity Measures for Generalized Trapezoidal Fuzzy Number	24
3.3 Proposed Fuzzy Similarity Measure for Generalized Trapezoidal Fuzzy Numbers	31
3.4 Performance of the Proposed Fuzzy Similarity Measure	36
3.5 Chapter Summary	45
CHAPTER FOUR: DEVELOPMENT OF FUZZY CLASSIFICATION BASED ON COMBINATIVE ALGORITHMS	46
4.1 Introduction	46
4.2 Development of Fuzzy Inference Method for Combinative Algorithms	46
4.3 Illustrative Example of the Proposed Method	51
4.4 Chapter Summary	62
CHAPTER FIVE: EXPERIMENTATION USING DOMESTIC WATER CONSUMPTION DATASET	63
5.1 Introduction	63
5.2 Experimentation Under 2-class Domestic Water Consumption (DWC) Dataset	64
5.2.1 Combination on Mixed Performance of Fuzzy Classification Algorithms	65
5.2.2 Combination on Similar Performance of Fuzzy Classification Algorithms	68
5.3 Experimentation Under 3-class Domestic Water Consumption (DWC) Dataset	71
5.4 Discussion of the Experimentation Findings	74
5.5 Chapter Summary	86
