السَّلَامُ عَلَيْكُمْ وَرَحْمَةُ اللَّهِ

*“In the name of Allah, Most Gracious, Most Merciful”*

Alhamdulillah, first and foremost, we are grateful to almighty Allah, for the grace that we are able to complete this research about Learning Styles Preferences of Secondary Students.

Foremost, We would like to express my sincere gratitude to my lecturer for the continuous support of our Bachelor study and research, for his patience, motivation, enthusiasm, and immense knowledge. His guidance helped me in all the time of research and writing of this research. We could not have imagined having a better Lecturer and mentor for our Bachelor study.

Besides that, my sincere thanks also goes to my advisor Miss Ilyani binti Azer for her invaluable advice in monitoring and guiding us through out the duration of study for completing our research.

Last but not the least, We would like to thank and love our family, for giving birth to us at the first place and supporting me spiritually throughout our life. Finally, also thank you for our friends for their support and hope to complete our research.

Learning styles are various approaches or way of learning. They involve educating methods, particular to an individual that are presumed to allow that individual to learn best. Academic achievement or (academic) performance is the outcome of education in the extent to which a student, teacher or institution has achieved their educational goal. The research dealt on the learning styles of high and low academic achieving student of secondary school of the Sekolah Menengah Kebangsaan Tengku Bariah and Sekolah Menengah Kebangsaan Sungai Tong. By this research, researcher could know what the most preferable learning style toward of high school students. The learning preference were divided by four such as visual, auditory, tactile and kinesthetic. The researcher use method such as questionnaires to collect the information. With research show that the high and low achiever still use the same learning style in which the visual learning style preferences but only differentiate between both group were disciplines and attitudes of their own selves.
