ABSTRACT

Socio-technical congruence (STC) is a match between technical dependencies and actual coordination activities carried out by software engineers. STC reduces the resolution time for a modification request, decreases errors, and increases performance and software quality. Recent studies on STC have highlighted the inability of STC to represent a lower level of technical dependencies and the use of a limited range of actual coordination in the conceptualization. However, only a few studies investigated STC's relationship with task complexity in distributed development settings. In this study, we proposed an enhancement to the current STC model. This study enhanced the current STC model by constructing an integrated model of STC that conceptualizes lower-level technical dependencies and actual coordination and validate the enhanced STC model on task complexity in distributed software development. We performed linear regression analysis on three open-source software projects at the component level and discovered a significant negative relationship between congruence and task complexity. We observed that higher congruence would decrease the changes made in lower-level technical dependencies (component level) to complete modification requests. We also observed that congruence does not necessarily reflect task complexity when developers are already aware of the area of change. This study contributes the following: 1) an enhanced STC model and 2) an additional piece of empirical evidence on the relationship between the enhanced STC model on task complexity in distributed software development.

ACKNOWLEDGEMENT

My gratitude and thanks go to my supervisor, Assoc Prof Ts. Dr. Shukor Sanim Mohd Fauzi and my co-supervisor, Dr. Marshima Mohd Rosli, for their guidance, understanding, patience, and encouragement to finish this thesis.

My deepest gratitude goes to my beloved family and friends. It would not be possible to write this thesis without support from them.

Finally, I want to thank the Ministry of Higher Education Malaysia under the Fundamental Research Grant Scheme (FRGS). Without their support and funding, this project could not have reached its goal.

CHAPTER ONE: INTRODUCTION	1
1.1 Research Background	1
1.2 Problem Statement	3
1.2.1 Developer Coordination Problems in Software Engineering	3
1.2.2 Socio-technical congruence gap	3
1.3 Research Questions	5
1.4 Research Objectives	5
1.5 Research Scope	5
1.6 Significance of the Study	6
1.7 Definitions of Terms	7
1.8 Thesis Outline	8
CHAPTER TWO: LITERATURE REVIEW	9
2.1 Introduction	9
2.2 Coordination in Software Engineering	9
2.2.1 Coordination Issues in Software Engineering Projects	9
2.2.2 Approaches to Measure Coordination and Their Limitations	11
2.3 Socio-Technical Congruence (STC)	12
2.3.1 The Gaps That Exist in the Literature	20

2.4	The Existing STC Model	21
2.4.1	Limitations of the Current STC Model	23
2.5	Technical Dependencies in Software Engineering Projects	23
2.5.1	Library Dependencies	25
2.5.2	Components Dependencies	26
2.5.3	Modules Dependencies	28
2.5.4	Requirement Dependencies	29
2.5.5	Task Dependencies	29
2.5.6	Interface Dependencies	30
2.5.7	Package Dependencies	31
2.5.8	File Dependencies	32
2.5.9	Feature Dependencies	33
2.5.10	Class Dependencies	34
2.6	Impact of Technical Dependencies in Software Engineering Projects	35
2.7	Software Engineering Project in Open Source Environment	36
2.8	Task Complexity in Open Source Projects	37
2.9	Linear Regression	38
2.10	Conclusion	38
CHAPTER THREE: RESEARCH METHODOLOGY		39
3.1	Introduction	39
3.2	Methodology	40
3.2.1	Systematic Literature Review (SLR)	40
3.2.2	Enhanced STC Model	43
3.2.3	Empirical Study	46
3.3	Conclusion	48
