## ACKNOWLEDGEMENT

Alhamdulillah, praise be to Allah for giving me enough time to complete this research study. This research will not be accomplished without cooperation and contribution of many people.

First and foremost, I am highly indebted to my advisor, Ms. Nur Azwani binti Mohamad Azmim also Pn. Anita bt Md. Shariff for her guidance, advice, cooperation, encouragement and useful ideas in completing my research regarding **The Determinants of REIT Performance in Malaysia**.

I would like to express my gratitude towards my parents, Joham bin Muda and Maimon binti Hitam and staff of ERP office for their inspiration and moral support towards the end.

I am particularly grateful for the cooperation of my supervisor, Mrs. Tan Chooi Yuen for knowledge and experience at Malaysia Airline System Berhad.

Finally, many thanks and appreciations go to my colleague in encouraging and also people who have willingly helped me out with their abilities.

Thank you.

## **ABSTRACT**

The Real Estate investment trust (REIT) is a worldwide concept and had spread over 30 countries. REIT is providing a new way to invest without buying the property directly. It offers affordability, stable income stream as well as exposure to large scale real estate. M-REIT had been introduced in 1980's; however it took a long way to transpire like nowadays. This research is done to understand the definition and development of REIT in Malaysia and thus study on the performance of Malaysia REIT based on Distribution Yield (DY) approach. The dependent variable is DY as proxy of REIT performance. The independent variables were unemployment rate (UNEM), interest rates (IR), exchange rates (EX) and GDP per capita (GDPC). This study assessed twelve (12) listed real estate investment trusts in Malaysia. Information regarding distribution yield from 2007 until 2012 were gathered from 12's M-REITs respective annual reports. The finding and analysis shows there were significant positive relationship between unemployment, exchange rates and GDP per capita. Interest rates were expected to show significant negative relationship towards REIT performance.
