ABSTRACT

In Malaysia, the motorcycle is the higher demand of transportations mode and its impact is regarded as one of factors of motorcycle crashes. Among these crashes, red light runner (RLR) contributes the frequency of crashes happened in Malaysia. It represents a significant safety problem that should deserve a through attention. Therefore, the aim of this study is to tackle this problem by developing a motorcycle RLR assessment model. This model was integrated from the influencing factors at signalised intersection in Shah Alam, Selangor using Stochastic Petri Nets (SPN) approach. The process in developing the model started with direct observations using video recorder at the sites study. Signalised intersection at Section 7, Persiaran Kayangan was chosen as sites study. It was done to understand the conflict event sequences of motorcycle. The conflict event sequences were translated into SPN elements for the model development. The developed model is called MoRCE (motorcycle RLR of conflict risk estimation) model. Three categories factors such as human behaviours, engineering and environmental were identified as the model parameters. Whereas, it divided into human behaviours, traffic volume, numbers of lanes, approaching speed, weather, amber phase change interval, signal phase timing and cycle length. The result showed that these model parameters influence the RLR motorcyclist. Validation of MoRCE model by comparing the conflict risk values of actual and predicted model was successful and accepted. The comparison was conducted on 14 signalised intersections in Shah Alam, Selangor through Chi-square test. The test indicated that the conflict risk values from MoRCE model and those from the sites followed the same distribution trend.

ACKNOWLEDGEMENT

Alhamdulillah, I have finally completed this thesis with all hard work and blessings from Allah. First of all, I would like to thank my dearest husband, Hafizullah Muhammad and my son, Uwais Al-Qarani who are always patient and who has given me the much needed support and love. Also, thank you very much to my dear parents, brothers, and sisters who always pray for my success.

I would like to express my highest gratitude to my supervisor, Dr. Intan Rohani Endut; who always given me motivation and support, provided me with help and constructive comments for a better output. Special thanks to Dr. Siti Zaharah Ishak and Dr. Rizati Hamidun, my associate supervisors for introducing me to thesis writing and providing knowledge and assistance.

I also wish to acknowledge IPD Shah Alam, Selangor for helping me to access the motorcycle crash from PDRM. To all my colleagues, friends, and Faculty of Civil Engineering staff, I am really glad and thankful to be part of you. Thank you so much. Finally, I would like to acknowledge that this MSc research has been funded by KPT through scholarship from MyBrain MyMSc and grant from Research Management Centre (RMC), UiTM Shah Alam, Selangor.

TABLE OF CONTENTS

	Page
CONFIRMATION BY PANEL OF EXAMINERS	ii
AUTHOR'S DECLARATION	iii
ABSTRACT	iv
ACKNOWLEDGEMENT	v
TABLE OF CONTENTS	vi
LIST OF TABLES	x
LIST OF FIGURES	xi
LIST OF ABBREVIATIONS	xiii
CHAPTER ONE: INTRODUCTION	1
1.1 Background of Study	1
1.2 Problem Statements	4
1.3 Objectives	6
1.4 Research Framework	6
1.5 Scope of Study	7
1.6 Significance of The Study	8
1.7 Thesis Structure	9
CHAPTER TWO: LITERATURE REVIEW	11
2.1 Introduction	11
2.2 Motorcycle Crashes	11
2.2.1 Contributing Factors of Motorcycle Crashes	12
2.2.1.1 Environmental Factors	13
2.2.1.2 Human Behaviour Factors	14
2.2.1.3 Engineering Factors	17
2.3 Definition of Red Light Runner (RLR)	18
2.4 Signalised Intersections	20
2.4.1 Definition of Signalised Intersections Zone	21
2.4.2 Traffic Conflict at Signalised Intersections	22
2.4.3 Traffic Conflict Technique in Traffic Safety Study	23

2.5 Existing Motorcycle Conflict Model at Signalised Intersections	24
2.6 Summary	30
CHAPTER THREE: RESEARCH METHODOLOGY	32
3.1 Introduction	32
3.2 Methodology Framework	32
3.2.1 Preliminary Stages	34
3.2.1.1 Site Selection	35
3.2.2 Data Collection	39
3.2.2.1 Primary Data	40
3.2.2.2 Secondary Data	41
3.2.3 Data Analysis	42
3.2.3.1 Documenting of Conflict Event Sequences	42
3.2.3.2 Parameter Considerations	43
3.2.4 Model Development	46
3.2.4.1 Translating Motorcycle RLR Conflict Event Sequences Into SPN	46
3.2.4.2 Hierarchical Structures of The Model Development	47
3.2.4.3 Construction of Model Structure	48
3.2.4.4 Modelling Using II-Tool	48
3.2.5 Model Analysis	50
3.2.6 Model Validation	51
3.3 Output	53
3.4 Summary	53
CHAPTER FOUR: DEVELOPMENT OF MoRCE MODEL	55
4.1 Introduction	55
4.2 Sequences of Motorcycle Crossing	55
4.2.1 Scenario of Motorcyclist Crossing	57
4.3 Motorcycle RLR Conflict Event Sequences	59
4.4 Motorcycle RLR Conflict Risk Estimation (MoRCE) Model	64
4.4.1 Motorcycle Crossing Event Sequences Execution	66
4.4.2 Vehicle Crossing Event Sequences Execution	66
4.4.3 Numbers of Lanes	67
4.4.4 Approaching Speed	68
4.4.5 Weather	70
