PREFACE

This project paper is prepared in partial fulfillment of the Advanced Diploma in Accountancy course. For this purpose, the writer has chosen a topic on 'An Overview of the Toll Collection System of the Malaysian Highway Authority'.

Toll collection has become one of the hot topics recently, among which many people are not happy in having to pay high tolls and in the introduction of the closed toll system along the Kuala Lumpur^P - Air Keroh expressway and the Ipoh - Changkat Jering expressway. These reasons have prompted the writer to study the operations of the toll collection systems.

In this paper, the reader will be able to see the need for the toll collections, how the systems are being operated, their control and the problems faced by the Malaysian Highway Authority. Towards the end of the paper, the writer has compared the systems used with the toll collection systems in Japan.

The writer hopes that this paper has somehow benefited the reader.

ACKNOWLEDGEMENT

During the writing of this project paper, the writer wish to acknowledge the assistance given by the persons who have made this paper possible and success. The writer would like to extent her sincere word of appreciation to her advisor, Miss Karen Tan for her guidance, advice and kind understanding of the problems faced in carrying out the project paper.

A word of thanks is also forwarded to the officers and staffs of the Malaysian Highway Authority for their cooperation and willingness in providing information for making this project paper possible.

The writer also wish to take this opportunity to thank the audit staffs for their cooperation.
