ACKNOWLEDGEMENT

First of all I would like to praise Mighty Allah for giving me the blessing and strengh to complete this paper. Also, my heartiest gratitude to all who have been instrumental in assisting me throughout the preparation and completion of this paper.

For all the PETRONAS NGV Project Team Staff namely Encik Zacchariah, Encik Zulkifli, Encik Mohd Faiz, Encik Faiz, Nik Ram Zaedi, Mr Lee Giok Seng, Encik Sukor Encik all the BCG Consultants, my most greatful thanks for their cooperation and support. Not forgetting my most thanks to my supervisors, Encik Hasnul Johari for his cooperation, supervision and understanding and to Cik Adoni, who has been a great companion throughout the duration of my training, you.

My utmost gratitude also goes to Encik Zubir Ahmad Suhaimi, my advisor who has been most supportive and understanding and for all his valuable assitance, constructive critism and guidance in completing this paper.

Last but not least, my thanks for my wonderful family and a very special person, who have been most understanding and supportive throughout the completion of this paper.

EXECUTIVE SUMMARY

Due to the steady depletion of oil and the global call for environment, natural gas has been established today as one of the world's primary energy resources. In Malaysia itself, the launching of Peneisular Gas Utilisation Project under the natural Gas Distribution System indicated the larger role natural gas would be taking throughout the century. However, the gas option of using natural gas as alternative vehicular fuel in the Malaysian market is still unknown among the consumers actual perception and acceptance. Therefore, this study has been done in hope of establishing the actual facts regarding the option of using NGV from the present fuel. However, due limitation in time and resources, the scope was limited to one of the present NGV Program targetted market only namely taxi drivers in the Klang Valley area. The part of the paper touches on the theoretical part namely introduction, objectives, methodology, NGV Marketing Strategy and so forth. The later part of the paper however emphasize more on the findings of the study, its analysis, conclusion and recommendations.

The findings are based on 100 questionnaires distributed to a sample of study which are segmented according to several factors. The factors included are geographical, demographical and behavioural.
