ACKNOWLEDGEMENT

Assalamu'alaikum warahmatullahi wabarakatuh.

I am being grateful to the God for the good health and wellbeing that were necessary to complete this thesis.

I am wish to express my sincere thanks to the Universiti Teknologi MARA, Dungun in given me an opportunity to conduct this thesis and for providing me with all the necessary facilities in completing this thesis hence improving knowledge and gave better understanding throughout this research project. Highest thankful to my beloved advisor, Miss Nur Azwani binti Mohamad Azmin and my co-advisor, Dr Mohamad Shukri bin Johari in guiding me to complete this thesis. I am being in extremely thankful and indebted to them for sharing their expertise, sincere and valuable guidance and encouragement extended to me. I am being also thankful to Puan Siti Rubaika binti Kamaruzaman as my supervisor at Petroliam Nasional Berhad (PETRONAS) for allowing me to meet my advisor and a little bit helping me throughout this thesis.

I am take this opportunity to express gratitude to all the families for the unceasing encouragement, support and attention. A millions appreciation also given to the long listed friends for their help and supported me through this venture and the contribution of the idea in completing this thesis.

ABSTRACT

Household debt in Malaysia has been keep increasing from time to time. Hence, it attracts economist to figure out the reason why the level of household debt increasing. This study is conduct a preliminary investigation on the determinants of household debt in Malaysia and to investigate the most significant factors that influencing the household debt in Malaysia. A multiple regression model was constructed to determine the relationship between the independent variables which is gross domestic product, interest rate and housing price index. The method used is Ordinary Least Square Method (OLS) by using monthly time series data spanning from the year 2005 until 2017 and have 52 observations to achieve the objective of the household debt in Malaysia. This method reviews that gross domestic product, interest rate and housing price index are positive and highly significant at 1% level towards the household debt. The most significant variable that influence the household debt in Malaysia is the housing price index. All the independent variables follow the expected sign which is positive. Therefore, it is suggested for the government to control the household debt level in Malaysia and monitor the banks and financial institution in giving out loan to the people in Malaysia.
