Nowadays, stress has notoriously become norm among people especially working class community and even students. As a result, more people have to deal with psycho-social issues such as anxiety, depression and others to name a few. Medically, stress has major impact on the mental wellness and worse still could impact physical wellness such as skin. Skin is a major organ in human body and also the first defence our body from contamination. With the introduction of various psychological and chemical treatment, a lot of effort has been tried to combat this issue. The readily available treatments are susceptible a treatment with psychological doctor that prescribed counselling and medicine to handle stress. The first step to handle this problem is to avoid any stressing work and environment that can give stress to human body. Herein, we propose an innovation called **SMILE (Stimulating Mood & Illuminating Longevity Enchantment): INNOVATIVE FACIAL MIST** that derived from a novel and innovative formulation from essential oils that help to uplift the mood. Considering the high cost of health-care bills and the side effects of conventional medications, adding essential oils to your personal medicine shelf can make a world of difference. From the studies and researches, essential oil as the main ingredient in the mist acts as an antidepressant, stimulating, detoxifying, antibacterial, antiviral and calming properties. Studies also prove that essential oil is safe and cost-effective therapy for several health concerns. Thereupon, with novel formulation, **SMILE: INNOVATIVE FACIAL MIST** could serve dual-effects which are calming effect that enable stress reducing and more importantly positive health benefits where could promote healthier skin to consumers.
