ABSTRACT

Graph Theory (GT) is the study of graphs, which are mathematical structures used to model pairwise relations between objects. A precisely and quickly forecast stock price peaks and valleys will help in managing the stock market appropriately and guide it in a healthy direction, which will be a strong support for the economy's long-term growth. Volatility of stock prices can make it challenging for investors to predict the stock prices, as it often fluctuates rapidly and unpredictably. The techniques in GT can be used to analyse the selected stocks, providing insights into market behavior. The main objective in this study is to analyse stock prices using an undirected graph and identify the best sector using k -core analysis, which will help the investors understand the pattern of the stock price movement and decide which sector to invest in the future. The relationship of one stock to another is calculated by using the Spearman rank correlation and comparing it with the minimum threshold, which is 0.6, to get the adjacency matrix. By using the adjacency matrix, an undirected graph is obtained, and k -core analysis is used to identify the best sector by determining, which stock is in the core-dominant category. From all the steps in the methodology, the objective can be achieved and it can be concluded that both the traditional and GT methods have the same result, which is that industrial was the best sector for the investor to invest in. Combining various methods and analysing the stock for a longer time period are examples of recommendations that can be used in future studies.

ACKNOWLEDGEMENT

IN THE NAME OF ALLAH S.W.T., THE MOST GRACIOUS, THE MOST MERCIFUL.

First and foremost, we would like to thank Allah the Almighty, most gracious and merciful. With His permission, this study had been completed. We are grateful to Allah S.W.T for giving us the strength to complete this project successfully. We would like to express our greatest appreciation to our supervisors, Dr. Rossidah Wan Abdul Aziz and Madam Wan Noor Hayatie Wan Abdul Aziz for their great interest, guidance and encouragement throughout the preparation of this report. All advices and support are definitely helpful in proceeding with this report.

Besides, we would like to express our sincere gratitude to the Universiti Teknologi MARA (UiTM), especially to the College of Computing, Informatics and Mathematics that has been contributed to the completion of this project. Not to be forgotten to our lecturer, Mr. Mohd Azdi Maasar for his advice, guidance, support and helps throughout the process of this project.

We also want to thank to our parents and the whole family for their encouragement and support throughout the preparation of this project and not to forget, to all our friend who also helped us in order to complete this project. This is because without all of them, it is hard for us to finish this project.

Alhamdulillah, finally it is the end of this project after several months of handworks, determination and commitments to complete this project. Last but not least, we would like to thank all those who directly or indirectly contribute help in this study toward us.

TABLE OF CONTENTS

SUPERVISOR’S APPROVAL	i
AUTHOR’S DECLARATION	ii
ABSTRACT	iii
ACKNOWLEDGEMENT	iv
TABLE OF CONTENTS	v
LIST OF TABLES	vii
LIST OF FIGURES	viii
LIST OF ABBREVIATIONS	ix
CHAPTER ONE: INTRODUCTION	1
1.1 Introduction	1
1.2 Problem Statement	2
1.3 Research Objectives	3
1.4 Significant and Benefit of Study	3
1.5 Scope and Limitations of Study	3
CHAPTER TWO: LITERATURE REVIEW	5
2.1 Introduction	5
2.2 Previous Study on Stock Prediction Problem	5
2.3 Application of Graph Theory	10
2.4 Application on k -core Analysis	13
2.5 Gap Analysis on Graph Theory of Stock Price	14

2.5.1	Type of Application in Graph Theory	14
2.5.2	Previous Study on Type of Graph Theory	15
2.6	Summary	15
CHAPTER THREE: RESEARCH METHODOLOGY		16
3.1	Introduction	16
3.2	Flow of Research Methodology	16
3.3	Data Collection	18
3.4	Data Analysis	19
3.5	Model Formulation	20
3.5.1	Spearman Rank Correlation	20
3.5.2	Adjacency Matrix Formulation	21
3.6	Undirected Graph	21
3.7	<i>k</i> -core Analysis	22
3.8	Summary	22
CHAPTER FOUR: RESULTS AND DISCUSSIONS		23
4.1	Introduction	23
4.2	Analysis by Traditional Method	23
4.3	Average Quarterly Closed Price Result	24
4.3.1	Spearman Rank Correlation Result	25
4.3.2	Adjacency Matrix Formulation Result	36
4.4	Undirected Graph Result	46
4.5	<i>K</i> -core Analysis Result	47
4.6	Verification and Validation of the Result	51
4.7	Summary	52
CHAPTER FIVE: CONCLUSION AND RECOMMENDATIONS		54
5.1	Conclusion	54
5.2	Recommendation	56
