**Thesis submitted in fulfilment of the requirements for Bachelor of
Information Systems (Hons.) Business Computing Faculty of
Computer and Mathematical Sciences**

January 2022

ACKNOWLEDGEMENT

Alhamdulillah, praise and gratitude to Allah for His Almighty and ultimate grace, I was able to complete this study within the time frame set. First and foremost, I want to express my gratitude to Dr Hasiah Binti Mohamed @ Omar which is my supervisor and Madam NorulHidayah Binti Isa is my lecturer for this subject, for their guidance, concern, and advise during this project. This project would not have been finished if they hadn't lent a hand and been involved in every step of the way.

My loving parents, Anwar Bin Timbang and Wahidah Binti Muchsin, deserve special mention for their unwavering support. Thank you so much for everything you've done for me, both financially and emotionally. Thank you for your blessings and for always being there for me when I needed comfort or good counsel. May Allah S.W.T. reward you for your generosity.

Last but not least, I want to express my thanks to Norain Binti Narsah, one of my closest friends, for all of the support, advice, recommendations, and aid throughout this course and the production of my thesis. I appreciate all of the moments we spent together on our journey and may Allah S.W.T. repay your kindness.

ABSTRACT

Online Traditional Malay Massage Appointment System for kak Ilma Perubatan Tradisional (KIPT) is a system developed to manage an appointment for customers. The necessity for a good database system is triggered by communication issues and an unstructured manner of giving appointment information via social media and social communication platforms such as Whatsapp. Besides, unstructured platforms for appointments cause difficulties to both customers and the organization especially when there were problems happened. Online Traditional Malay Massage Appointment System (OTraMAS) for KIPT was developed by following the adapted Waterfall Model. The methodology consists of five phases which were requirement analysis, system design, implementation, testing, and deployment. System testing was undertaken after the construction of the Online Traditional Malay Massage Appointment System for Perubatan Kak Ilma was completed to confirm the system's functioning and efficiency. A tester will assess the functioning of a system built by a developer and mark the features of the system that perform well on a test case. There were a few recommendations that can be applied on the Online OTraMAS in the scope of the functionalities and the capabilities of the system which are added button cancel for admin and the system in future has transaction online. The system usability scale for user evaluation of OTraMAS was 73.08. Based on the general guideline on SUS score interpretation, the SUS grade for this system testing is B which was good. It is hoped that in the future OTraMAS for KIPT will be enhanced for its features to be a better online appointment website.
