

**A COMPARATIVE ANALYSIS OF INTEGER LINEAR  
PROGRAMMING AND ANT COLONY OPTIMIZATION IN  
TRAVELLING SALESMAN PROBLEM FOR TOURIST  
DESTINATIONS IN TERENGGANU**

## ABSTRACT

Tourism is a significant industry for regional economies. For travellers to fully experience a destination's attractions, effective route planning is essential. The task of maximizing visitor experiences while minimizing travel lengths is known as the Travelling Salesman Problem (TSP). To address the TSP for tourist attractions in Terengganu, Malaysia, this study compares two optimization methods which are Integer Linear Programming (ILP) and Ant Colony Optimization (ACO). Using ILP, the study creates a precise mathematical model for TSP that minimizes the overall distance travelled to find the best route. Parallel to this, pheromone trails and heuristic information are used to repeatedly build pathways using ACO, inspired by ants' foraging activity. The project assesses the two methods by considering scalability, computing efficiency, and quality of the solutions. To model realistic situations, real-world data on tourist sites in Terengganu is used. The ILP and ACO are put into practice and adjusted to consider the distinct features of the local tourism environment. Thorough analysis is done on performance measures, such as total travelled distance, efficiency nodes covered, optimality ratio, and computational time. The preliminary findings provide insight into how well they might be used to actual TSP cases. This comparative analysis makes a significant contribution to the larger fields of optimization and tourism management.

## ACKNOWLEDGEMENT

Firstly, I would want to express my sincere gratitude and appreciation to Allah S.W.T for providing me with the courage to overcome the challenges I had while completing this research. Undoubtedly, there have been challenging times, but I have been able to get through them by relying on Him.

I would like to sincerely thank the following individuals for their invaluable contributions to the completion of my final year project.

Throughout this project, Madam Siti Musliha binti Nor-Al-Din provided me with important guidance, support, and insightful comments for which I am incredibly grateful. The quality of my work has greatly benefited from her knowledge and mentoring.

I also want to express my gratitude to Madam Norulhidayah binti Isa for her guidance and recommendations on how to make the research better. Not to be missed, I appreciate the guidance from Dr. Rivaie bin Mohd Ali as the Final Year Project Coordinator.

Lastly, I am thankful of my friends who helped me through the difficult parts of this journey by offering support, encouragement, and opinions.

## TABLE OF CONTENTS

DECLARATION BY THE SUPERVISOR	I
DECLARATION BY THE CANDIDATE	II
ABSTRACT	III
ACKNOWLEDGEMENT	IV
TABLE OF CONTENTS	V
LIST OF TABLES	X
LIST OF FIGURES	XI
1.0 INTRODUCTION OF PROJECT	1
1.1 Introduction	1
1.2 Background of Study	1
1.3 Problem Statement	4
1.4 Objectives	5
1.5 Significance of Project	5
1.6 Scope of Project	6
1.7 Project Benefit	6
1.8 Definition of Terms and Concepts	8
1.9 Organisation of Project	9
2.0 LITERATURE REVIEW	11
2.1 Introduction	11
2.2 Literature Review	11
2.2.1 Solving Travelling Salesman Problem	11
2.2.2 Solving TSP using Integer Linear Programming	13
2.2.3 Solving TSP using Ant Colony Optimization	15

2.3	Conclusion	16
3.0	METHODOLOGY	17
3.1	Introduction	17
3.2	Research Steps	17
3.3	Integer Linear Programming	21
	3.3.1 Formulate the Objective Function	21
	3.3.2 Define Decision Variables	22
	3.3.3 Set Up Constraints	22
3.4	Ant Colony Optimization	24
	3.4.1 Parameters in ACO algorithm	24
3.5	Procedure of ACO	25
	3.5.1 Initialization parameters	26
	3.5.2 Transition Rule	26
	3.5.3 Pheromone Updating	27
	3.5.4 Pheromone Evaporation	28
	3.5.5 Termination Criterion	30
3.6	Conclusion	30
4.0	IMPLEMENTATION	31
4.1	Introduction	31
4.2	Network Representation	31
4.3	Construct Distance Matrix	33
4.4	Integer Linear Programming	34
	4.4.1 Transform from asymmetric to symmetric distance matrix	35
