ACKNOWLEDGEMENT

Many individuals has contributed to the success of this project paper. First and foremost, I would like to thank God for giving me the strength and health to do this project paper until it done.

Deepest gratitudes to my course tutor, Dr Imbarine Bujang as well as my advisor of this project paper, Tuan Haji Sheikh Junaidi Bin Mohammad for their support and encouragement, valuable guidance, and comment from the beginning until the end of this project paper.

Appreciation also goes to my housemates and friends for their thoughts, comments and support. They were always there when I needed them most. Besides, I would like to thanks to the librarian of UiTM branch Kota Kinabalu, Sabah for providing me with a good environment and facilities in order to complete this project paper.

Finally, an honorable mention goes to my families for their understandings and supports on me to complete this task so that I will not not procrastinate in doing it. Without helps of the particular that mention above, I would face many difficulties while doing this project paper.

ABSTRACT

THE RELATIONSHIP BETWEEN POPULATION AND ECONOMIC GROWTH IN MALAYSIA

BY

JESSE ANAK JOHN SIAN

The number of Malaysia's population is increasing year by year. Besides, population has played an important role not only in stimulating the economic growth in Malaysia but also contributed significantly to the growth of certain sectors especially in the industrial and manufacturing sector that demand high labour.

Apart from that, a large population also provides a large domestic market for the economy. Moreover, population growth encourages competition, which induced technological advancements and innovations. The primary aim of this research is to identify the relationship between population and economic growth in Malaysia and this is done through reviewing the existing literature. Besides, the data is taken generally from the year 1980-2009. This study employs the Ordinary Least Square (OLS) method in order to examine the relationship between the population and economic growth.

The result of the ordinary least square (OLS) shows that the finding in this study strongly support the null hypothesis that there is a positive relationship between population and economic growth. Besides that, the result from the finding is consistent with Bilal Savas, who the evidence of a long-run relationship between population and real per capita income and provides strong support for the hypothesis that population is driving growth. Overall, the relationship between population and economic growth is strong and positive in the CAEs over the period of the analysis.
