ACKNOWLEDGEMENT

I would like to Allah S.W.T in giving me strength to completing this research. I also would like to express my sincere gratitude to my advisor Mr.Wahi for the continuous support of my study and research, for his patience, motivation, enthusiasm, and immense knowledge. His guidance helped me in all the time of research and writing of this thesis. I could not have imagined having a better advisor and mentor for my research study. To my family that always support me from financially and moral support. To all my friends that always been helpful in completing this research.

ABSTRACT

This paper focuses on the study of the long run relationship between money supply, inflation and economic growth. The sample period of this study consists of 33 years for each variable start from 1979-2011. Cointegration is used to examine the long-run relationship with all the macroeconomic variables. Estimation result indicate a data for money supply is not stationary and the data for inflation and is stationary. The cointegration test also shows us that there is long term relationship between the variables.
