OIL PALM PLANTATION IN MALAYSIA: A COBB-DOUGLAS PRODUCTION FUNCTION

NUR NADZIRAH BINTI MOHD PURI 2013449728

Submitted in Partial Fulfilment of the

Requirement for the

Bachelor of Business Administration with Honours (Business Economic)

FACULTY OF BUSINESS MANAGEMENT
UNIVERSITI TEKNOLOGI MARA
KOTA KINABALU, SABAH

JUNE 2016

ACKNOWLEDGEMENT

In the name of Allah, the Most Gracious and the Most Merciful

Alhamdulillah after a few weeks struggled facing with many difficulties, in the end I managed to finish my thesis report. Special thanks to my family for their support and motivation throughout years of studies till I am able to complete my degree. Not to forget my advisor Tuan Haji Wahi bin Ismail for all his guidance and advice in the process of completing my final year project paper. I also would like to thanks other lecturer as well for sharing their knowledge and support during my studies year. Without all of these help, I would not be able to finish my project paper as well as ready for the VIVA presentation. To all my housemate, thanks a lot for your support and encouragement to keep me up throughout the progress of completing my thesis report.

Thank you very much and am really appreciated with all help.

ABSTRACT

This paper attempts to discuss on the factor that affects production function in Malaysia plantation oil palm. All primary data are gathered from sources such as Malaysia Plantation Oil Berhad (MPOB) and Economy Planning Unit (EPU). It was taken based on yearly basis ranging from year 1982 to 2014. A rapid development economy in Malaysia is one of the factors that led to a higher demand for labor and capital in the industry. Productivity of a country plays an important role in determining economic growth. Besides, the study will also investigate the relationship between outputs and inputs in oil palm plantation. By using time series data for 33 years, researcher will be using a theory based on Cobb-Douglas Production function to derive the model specification in this study and Ordinary Least Square as estimation model to calculate the production function. The result from this study will show whether which factor has significant impact on oil palm plantation.

Keyword: factor, production function, plantation palm oil, Malaysia.
