**OBJECT DETECTION IN AERIAL IMAGES
USING CONVOLUTIONAL NEURAL NETWORK
(CNN)**

WAN NUR ALYA ATHIRAH BINTI WAN ROSHDEE

BACHELOR OF COMPUTER SCIENCE (Hons.)

FEBRUARY 2024

ACKNOWLEDGEMENT

In the name of Allah SWT, the Most Merciful and Forgiving. All praise and thanks to Allah SWT and His great mercy for allowing me to finish this Final Year Project for the topic Project (CSP650). Thank Allah SWT for all the possibilities, challenges, and strength that have gone into finishing this endeavour.

Firstly first, I would like to convey my deepest appreciation to my project supervisor, Dr Zakiah binti Noh for helping me finishing up this project by giving me guidance, beneficial information, assistance, and tips regarding this project. Thank you, Dr, for advising and supporting me throughout this project and for devoting me your precious time in helping me.

In addition to that, I would also like to express my special thanks to Madam Ummu Fatimah binti Mohd Bahrin for your exceptional consideration, expertise, and support during Project (CSP650) subject. The ongoing attention to our study has had a huge influence on my overall experience of learning.

Finally, not to forget, I would also like to express gratitude to my mother and my family for their countless support and encouragement towards me during the completion of this project. Moreover, all my friends and classmate also had play part in this project. Thank you for always lending me some ears, advice, and acknowledgement when it was required.

ABSTRACT

Object detection in aerial images helps a wide range of defence and security agencies to monitor by recognising and identifying vehicles, monitoring essential facilities, and detecting potential hazards or suspicious activity. The article that related to this study were identified and described based on the chosen algorithm, objectives, problems, and the significance. To solve this aim, several steps will be used including analysis, design, development, evaluation, and documentation phases. It also has been explained about the use of Convolutional Neural Network (CNN) in the project, the advantages and disadvantages, the implementation of the algorithm in various problem and similar works with the project title. The aerial image dataset is split into 60% training and 40% testing sets, pre-processed for resolution and pixel normalization. A CNN model is then implemented with Adam optimizer. The model's accuracy is recorded and saved for detecting cars in aerial images, evaluated by user input to ensure accurate identification of cars and absence of cars. This project has achieved its objective where the system can detect object (cars) in aerial images with the highest accuracy. CNN were used to train the model with a split of 60:40 with the highest accuracy among the test result is 68.42%. The model's performance depends on the task, dataset, architecture, and implementation. Despite the potential of CNN in certain cases, the study's use of a Sequential CNN model resulted in reduced accuracy, possibly due to task complexity or overfitting issues.

TABLE OF CONTENTS

CONTENT	PAGE
SUPERVISOR APPROVAL	II
STUDENT DECLARATION	III
ACKNOWLEDGEMENT	IV
ABSTRACT	V
TABLE OF CONTENTS	VI
LIST OF FIGURES	IX
LIST OF TABLES	XI
CHAPTER 1	1
INTRODUCTION	1
1.1 Background of Study	1
1.2 Problem Statement	4
1.3 Objective	6
1.4 Project Scope	6
1.5 Significance of Study	7
1.6 Research framework	9
1.7 Conclusion	10
CHAPTER 2	11
LITERATURE REVIEW	11
2.1 Deep Learning	11
2.1.1 Relationship between deep learning and CNN	12
2.2 Object Detection in Aerial Images	14
2.3 Convolutional Neural Network Algorithm	16
2.3.1 Types of Convolutional Neural Network	18
2.3.2 Uses of Convolutional Neural Network	19
2.3.3 Advantages and Disadvantages of Convolutional Neural Network	20
2.4 Implementation CNN Algorithm in Various Problem	21

2.5	Similar Works	26
2.6	The Implication of Literature Review	30
2.7	Conclusion	32
CHAPTER 3		33
METHODOLOGY		33
3.1	Overview of Research Methodology	33
3.1.1	Detailed of Research Framework	33
3.2	Preliminary Study	37
3.2.1	Literature study	38
3.2.2	Data Collection	39
3.2.3	Data Pre-processing	42
3.3	Design Phase	43
3.3.1	System Architecture	44
3.3.2	System Flowchart	46
3.3.3	System User Interface Design	47
3.3.4	System Pseudocode of Selected Algorithm	48
3.4	Development Phase	49
3.5	Evaluation Phase	51
3.5.1	Confusion Matrices	51
3.6	Gantt Chart	53
3.7	Conclusion	55
CHAPTER 4		56
RESULT AND FINDING		56
4.1	Conceptual Framework	56
4.2	Explanation of the System Framework	59
4.2.1	Data Pre-processing	59
4.3	Implementation of CNN and Prototype	61
4.3.1	Input Representation	62
4.3.2	The Implementation of CNN Algorithm	64
4.3.3	Prototype Interface	70
