**CROSS-SITE DETECTION SYSTEM USING
SUPPORT VECTOR MACHINE**

AHMAD A'LIMMUDDIN BIN BAHRIM

**Thesis submitted in fulfilment of the requirements
for Bachelor of Computer Science (Hons.)
Faculty of Computer and Mathematical Science**

July 2023

ACKNOWLEDGMENT

Alhamdulillah, praise and thanks to Allah because of His Almighty and His greatest blessings, I was able to finish this research by the deadline. My supervisor, Sir Muhammad Atif Ramlan, has been a great help to me during this research, and I would want to express my profound gratitude for that. He was essential to my ability to do this assignment successfully; without him, I could not have.

I would like to express my sincere gratitude to my professor, Madam Ummu Fatimah Mohd Bahrin, for her help and expertise in the area of CSP650, both of which have been extremely helpful to me in my research. A special mention should also be made to my adored parents for their constant support and inspiration during this effort. I will always be appreciative of their support and kindness.

Last but not least, I would want to thank all of my beloved friends and those who have participated in this adventure and have given me their unflagging support and encouragement. This project would not have been possible without them.

ABSTRACT

A form of security issue called cross-site scripting (XSS) enables attackers to insert malicious code into a website. When a user accesses the website, the malicious code may steal personal data or carry out other undesirable actions. XSS attacks can be classified as stored, reflected, or DOM-based. With the help of machine learning techniques like Support Vector Machines (SVM), these attacks, which are frequent, can be stopped. A cross-site detection system for XSS scripting was created in this work utilising the Support Vector Machine (SVM) technique. Support Vector Machine (SVM) is a technique used to determine whether XSS scripts have been implanted in a website or not. Six different research approaches, including a preliminary study, requirement analysis, data gathering, design, implementation, evaluation, and documentation, were used to construct this system efficiently. The system's stated objectives could be successfully attained at the end of the study thanks to the tight alignment of these approaches with those goals. Next, the dataset used for this study is dataset named "Cross site scripting XSS dataset for Deep learning" can be download from website online which is Kaggle contributed by Syed Saqlain Hussain Shah. The dataset contains Cross site scripting attack (XSS) data along with benign data. The research is significant in addressing the serious threats posed by cross-site assaults to the security and integrity of web systems, and in contributing to the development of effective detection and mitigation strategies.

Table of Contents

ACKNOWLEDGMENT	5
ABSTRACT	6
CHAPTER ONE	11
INTRODUCTION.....	11
1.1 Background Study	11
1.2 Problem Statement.....	12
1.3 Question	13
1.4 Objectives.....	13
1.5 Project Scopes.....	14
1.6 Project Significance	15
1.7 Overview of Research Framework.....	16
1.8 Conclusion	16
CHAPTER TWO	17
LITERITURE REVIEW.....	17
2.1 Introduction.....	17
2.2 Overview of Cross-site Detection.....	18
2.2.1 Cross-site Scripting (XSS).....	18
2.2.2 Cross-site Scripting Affect.....	19
2.2.4 Benefits of Cross-site Detection.....	20
2.3 Machine Learning.....	21
2.3.1 SVM Algorithm and How Does It Works	22
2.4 Implementation SVM Algorithm in Various Problem	23
2.5 Similar works	29
2.6 The Implication of Literature Review.....	34
2.7 Conclusion	35
CHAPTER THREE	36
RESEARCH METHODOLOGY	36
3.1 Overview of Research Methodology.....	36
3.1.1 Detailed of Research Framework	36
3.2 Preliminary Phase.....	39
3.2.1 Literature Study.....	40
3.3 Requirement Analysis.....	40

3.3.1	Knowledge Acquisition	40
3.4	Data Preprocessing.....	41
3.4.1	Data Collection	41
3.4.3	Data Cleaning	42
3.5	Design Phase	43
3.5.1	System Architecture.....	44
3.5.3	User Interface	47
3.5.4	Pseudocode of Selected Algorithm.....	47
3.5.5	Prototype Implementation	49
3.6	Evaluation Phase	50
3.7	Documentation	51
3.8	Gantt Chart	52
3.9	Conclusion	52
CHAPTER FOUR.....		53
RESULTS AND FINDINGS		53
4.1	Conceptual Framework.....	53
4.2	Result for Objective 1	54
4.2.1	Text Preprocess	54
4.2.2	Data Splitting.....	55
4.3	Result for Objective 2	57
4.3.1	SVM Implementation	57
4.3.2	Prototype Interface	60
4.4	Result for Objective 3	62
4.4.1	SVM Model Evaluation	62
4.4.2	Discussion.....	Error! Bookmark not defined.
4.5	Conclusion	68
CHAPTER FIVE		69
CONCLUSION		69
5.1	Project Summary	69
5.2	Project Limitations	70
5.3	Future Recommendations	70
5.4	Project Contributions	71
5.5	Conclusion	72
References.....		74
