ACKNOWLEDGEMENT

The researcher would like to express the gratefulness to the following individual who always give moral support in conducting this research. Without all of them, the researcher would not able to complete this project successfully.

First of all, the deepest gratitude towards Dr Ramesh Krishnan, the researcher's advisor for all of the useful and meaningful guidance for the research project. Dr Ramesh Krishnan is one of the lecturer who is known as a knowledgeable lecturer in the thesis writing and he also provide the researcher the ethical guideline as well as many brilliant ideas that can help the researcher to improve the research writing. Without Dr Ramesh's guidance, the researcher would not be able to conduct the research in a meaning ways. It was very grateful to have Dr Ramesh as the advisor for conducting this research paper.

A special thanks to the researcher's parent who always become the researcher's backbone through thick and thin during the research being conducted. Thank you for all the support, motivation and also the hardness that the researcher has to learn in order to become a good researcher. Not to forget, the researcher's friends and also classmates who always give a constructive suggestion and comments for the research studies. This is because, it is important to identify the research's strength and weaknesses as these two things become an important indicator for the researcher to design a good research. Thank you.

ABSTRACT

This research conducted as the purpose to identify and determine the factors that influence the safety behaviour of the employee in Johor Port Berhad in making workplace safer. This research involves 152 of data from respondents in Bulk and Breakbulk Department. The data being collected using survey questions, where the employee will be given set of questions regarding the safety behaviour in the workplace and the employee have to answer all of the question on each section. The researcher uses quantitative method analysis as to analyse the data from the respondents. Before the actual study being implied, the researcher conduct a pilot test as to identify the significant factors that may contribute to the safety behaviour. Hence, from the pilot test result, the independent variables being identified includes; adherence to safety procedure, safety climate and individual characteristic of impulsiveness. The researcher run then conduct a pilot test for 80 employees to test the validity and also the reliability of the research questionnaire as to ensure that the respondents able to understand the questionnaire . Then, the researcher run for the actual data of the 152 out of 250 of employees which is in the same population of department. The researcher uses SPSS Software to run the result from the respondent.
