

Universiti Teknologi Mara

**Mobile Banking Trojan Detection Using
Naïve Bayes**

Anis Athirah Binti Masmuhallim

**Thesis submitted in fulfilment of the requirements
for Bachelor of Computer Science (Hons.) College
of Computing, Informatics, And Mathematic**

JANUARY 2024

ACKNOWLEDGEMENT

I am immensely grateful for the successful completion of this study within the allocated timeframe, and I attribute my achievement to the Grace and Blessing of Allah S.W.T. I extend my heartfelt gratitude to my advisor, Dr. Najiahtul Syafiqah Binti Ismail, whose unwavering support and valuable guidance made this research possible. Her dedication and contributions have been invaluable to the completion of this work.

I would also like to express my sincere appreciation to Dr. Ummu Fatimah Binti Mohd Bahrin, who served as my lecturer for CSP600 and CSP650. Her knowledge-sharing, encouragement, and inspiration throughout the semester played a crucial role in shaping this project. Undoubtedly, my family members have been my pillars of strength during this pursuit. I extend a special thank you to my beloved parents for their continuous support, both emotionally and financially, which was instrumental in overcoming challenges along the way.

Moreover, I am grateful for the collaborative efforts of all those involved in this project. My classmates deserve my deepest appreciation for their assistance and emotional support, which significantly contributed to the successful completion of my final-year project. Once again, I want to emphasize that this accomplishment would not have been possible without the help and encouragement of these remarkable individuals. Their support has been pivotal in my academic journey, and for that, I am truly thankful.

ABSTRACT

Mobile phones have become immensely popular as intelligent terminals worldwide. The open-source nature of mobile platforms has facilitated the development of third-party mobile applications, but it has also created an environment for mobile malware to thrive. Unfortunately, the abundance of mobile applications and lax management of some app stores has led to potential risks for mobile users, including privacy breaches and malicious deductions of fees, among other adverse consequences. This research presents a mobile malware static detection method based on Naïve Bayes. The approach aims to offer a solution to protect users from potential threats such as Banking Trojan malware. The objectives of this project are to study the requirement of the Naïve Bayes algorithm in Mobile Banking Trojan detection, to develop a web-based detection system for Mobile Banking Trojan using Naïve Bayes, and to evaluate the performance and accuracy of the Naïve Bayes algorithm in the Mobile Banking Trojan detection. The methodology of this project consists of the research framework, preliminary study, design, development, and performance evaluation.

TABLE OF CONTENTS

CONTENT	PAGE
SUPERVISOR APPROVAL	ii
STUDENT DECLARATION	iii
ACKNOWLEDGEMENT	iv
ABSTRACT	v
TABLE OF CONTENTS	vi
LIST OF FIGURES	x
LIST OF TABLES	xii
LIST OF ABBREVIATIONS	xiii
CHAPTER 1: INTRODUCTION	1
1.1 Background of Study.....	1
1.2 Problem Statement	3
1.3 Objectives.....	5
1.4 Project Scope.....	6
1.5 Project Significance.....	7
1.6 Overview of Research Framework.....	8
1.7 Conclusion.....	10
CHAPTER 2: LITERATURE REVIEW	11
2.1 Mobile Malware	11
2.2 Mobile Malware Detection.....	13
2.3 Mobile Banking Trojan Detection.....	14

2.3.1 Banking Trojan.....	14
2.3.2 Characteristics of Banking Trojan.....	15
2.3.3 How the Banking Trojan Affects Mobile User.....	16
2.3.4 Benefits of Early Detection of Banking Trojan.....	18
2.4 Naïve Bayes.....	19
2.4.1 Overview of Naïve Bayes	19
2.4.2 Naïve Bayes and How It Works	19
2.4.3 Naïve Bayes Algorithm Feature & Characteristic.....	23
2.4.4 Gaussian Naïve Bayes Classifier.....	23
2.4.5 Advantages of Naïve Bayes Algorithm.....	24
2.4.6 Implementation of Naïve Bayes in Various Problems.....	26
2.6 Similar Work	32
2.7 Implication of Literature Review	37
2.8 Chapter Summary.....	38
CHAPTER 3: METHODOLOGY.....	39
3.1 Overview of Research Framework Methodology	39
3.1.1 Detailed Research Framework	39
3.2 Preliminary Study.....	42
3.2.1 Literature Study.....	42
3.2.2 Data Collection.....	43
3.2.3 Data Pre-processing.....	45
3.3 Design.....	47
3.3.1 Software Development Life Cycle (SDLC).....	48
3.3.2 System Architecture	49
3.3.3 Flowchart.....	50
3.3.4 Pseudocode.....	51
